Color Atlas of Biochemistry Jan Koolman, K H Rhm, 2005 Totally revised and expanded *Color Atlas of Biochemistry* presents the fundamentals of human and mammalian biochemistry on 215 stunning color plates. Alongside a short introduction to chemistry and the classical topics of biochemistry the second edition covers new approaches and aspects in biochemistry such as links between chemical structure and biological function or pathways for information transfer as well as recent developments and discoveries such as the structures of many new important molecules. Key features include: The unique combination of highly effective color graphics and comprehensive figure legends. Unified color coding of atoms, coenzymes, chemical classes and cell organelles that allows quick recognition of all involved systems. Computer graphics provide simulated 3D representation of many important molecules. This Flexibook is ideal for students of medicine and biochemistry and a valuable source of reference for practitioners.

Human Biochemistry and Disease Gerald Litwack, 2008-01-08 This textbook is specifically designed for upper division undergraduate or graduate students in life science or pre medical majors including dentistry or pharmacology who are required to take a biochemistry or medical biochemistry course but who are not necessarily biochemistry majors. The book adopts a unique approach to the topic compared with other biochemistry textbooks currently available in that each biochemical subject is introduced by a human disease relating the biochemical principles to be developed in that chapter. The goal is to make biochemistry more meaningful to the student who is not normally shown the connection between biochemistry and medicine. Includes an abundance of figures. Emphasizes human biochemistry. Introduces each chapter with a relevant disease or clinical relationship.
