Boron-Based Fuel-Rich Propellant WeiQiang Pang, 2019-04-09 Boron Based Fuel Rich Solid Rocket Propellant

Technology is a professional book that systematically introduces the latest research progress for boron based fuel rich solid propellants. It covers surface modifications, coating and agglomerating techniques, granulation and characterization of amorphous boron powders and its application to fuel rich solid rocket propellants. Technologies for controlling the processing methods and combustion performance of fuel rich propellants are examined, and the book concludes with a summary of the research progress in boron based fuel rich solid propellants and a look forward to the foreseeable development trends of military applications.

High-energy Combustion Agents of Organic Borohydrides XiaoHong Zhang, WeiQiang Pang, Luigi T DeLuca, Yu Zhao, 2023-08-25 Combustion agents for solid fuel propellants and explosives have gained widespread interest in recent years. Their high gravimetric heat of combustion enhances the performance of modern energetic materials. Borohydride compounds have proved to be excellent candidates in this application. High energy Combustion Agents of Borohydrides covers the most recent developments in the advanced combustion agents of borohydrides. Experimental studies covering the synthesis and characterisation of borohydrides are examined, as well as the interactions between borohydride and propellant ingredients. The properties of BHN nano Al composites are discussed, as is the effect of borohydrides on the properties of fuel rich solid propellants. The book concludes with a summary of the prospective development of high energy combustion agents in solid propellants and explosives and looks into the future development of military applications. Authored by renowned experts in the field, this book will appeal to researchers in academia and industry seeking a better understanding of how to improve the ignition and combustion performance of propellants and explosives.
