## **Developability Biotherapeutics Computational Sandeep Kumar:**

**Developability of Biotherapeutics** Sandeep Kumar, Satish Kumar Singh, 2015-11-18 Biopharmaceuticals are emerging as frontline medicines to combat several life threatening and chronic diseases. However, such medicines are expensive to develop and produce on a commercial scale, contributing to rising healthcare costs. **Developability of Biotherapeutics Computational Approaches** describes applications of computational and molecular **Progress and challenges in computational structure-based design and development of biologic drugs** Traian Sulea, Sandeep Kumar, Daisuke Kuroda, 2024-03-25 **Biopharmaceutical Informatics** Sandeep Kumar, Andrew Nixon, 2025-01-22 Despite the phenomenal clinical success of antibody-based biopharmaceuticals in recent years, discovery and development of these novel biomedicines remains a costly, time-consuming and risky endeavor with low probability of success. To bring better biomedicines to patients faster, we have come up with a strategic vision of Biopharmaceutical Informatics which calls for syncretic use of computation and experiment at all stages of biologic drug discovery and pre-clinical development cycles to improve probability of successful clinical outcomes. Biopharmaceutical Informatics also encourages industry and academic scientists supporting various aspects of biotherapeutic drug discovery and development cycles to learn from our collective experiences of successes and more importantly failures. The insights gained from such learnings shall help us improve the rate of successful translation of drug discoveries into drug products available to clinicians and patients, reduce costs and increase the speed of biologic drug discovery and development. Hopefully, the efficiencies gained from implementing such insights shall make novel biomedicines more affordable for patients. This unique volume describes ways to invent and commercialize biomedicines more efficiently. Calls for digital transformation of biopharmaceutical industry by appropriately collecting, curating and making available discovery and pre-clinical development project data using FAIR principles. Describes applications of artificial intelligence and machine learning (AIML) in discovery of antibodies in silico (DAbI) starting with antigen design, constructing inherently developable antibody libraries, finding hits, identifying lead candidates and optimizing them. Details applications of AIML, physics-based computational design methods and other bioinformatics tools in fields such as developability assessments, formulation and excipient design, analytical and bioprocess development and pharmacology. Presents pharmacokinetics, pharmacodynamics, PK/PD and Quantitative Systems Pharmacology (QSP) models for biopharmaceuticals. Describes uses of AIML in bispecific and multi-specific formats. Dr. Sandeep Kumar has also edited a collection of articles dedicated to this topic which can be found in the Taylor and Francis journal mAbs **Bioprocessing, Bioengineering and Process Chemistry in the Biopharmaceutical Industry** Kumar Gadamasetti, Stephen A. Kolodziej, 2024-11-23 This book outlines how advances in the diverse scientific and engineering disciplines of synthetic biology, DNA synthesis, production of protein therapeutics and bioinformatics have led to the commercialization of new complex biotherapeutic modalities in modern era including monoclonal and multi-specific antibodies, antibody drug

conjugates ADC fusion proteins CAR T and CRISPR technologies and applications mRNA vaccines and more Enabling operations to bring these life changing medicines into the hands of the needy patients include regulatory submissions to authorities across the globe as well as streamlined production across manufacturing networks deemed necessary and are outlined in dedicated chapters Bioprocessing Bioengineering and Process Chemistry in the Biopharmaceutical Industry Using Chemistry and Bioengineering to Improve the Performance of Biologics captures the state of the art for many of these new modalities offering innovative approaches to treat prevent and in some providential cases cure the disease This book will be of significant interest for many disciplines engaged jointly as teams convergently in delivering these medicines bioprocess engineers biologists chemists bioengineers genetic engineers healthcare professionals regulatory bodies among pharmaceutical industry professionals as well as in academic circles
