Case Control Studies Design Conduct Analysis Monographs In Epidemiology And Biostatistics:

Case-Control Studies Ruth H. Keogh, D. R. Cox, 2014-03-06 The case control approach is a powerful method for investigating factors that may explain a particular event. It is extensively used in epidemiology to study disease incidence, one of the best known examples being Bradford Hill and Doll's investigation of the possible connection between cigarette smoking and lung cancer. More recently, case control studies have been increasingly used in other fields including sociology and econometrics. With a particular focus on statistical analysis, this book is ideal for applied and theoretical statisticians wanting an up-to-date introduction to the field. It covers the fundamentals of case control study design and analysis as well as more recent developments including two stage studies, case only studies, and methods for case control sampling in time. The latter have important applications in large prospective cohorts which require case control sampling designs to make efficient use of resources. More theoretical background is provided in an appendix for those new to the field.

Research Methods in Occupational Epidemiology Harvey Checkoway, Neil Pearce, Douglas J. Crawford-Brown, 1989-05-25 Occupational epidemiology has emerged as a distinct subdiscipline of epidemiology and occupational medicine, addressing fundamental public health and scientific questions relating to the specification of exposure-response relationships, assessment of the adequacy of occupational exposure guidelines, and extrapolation of hazardous effects to other settings. This book reviews the wide range of principles and methods used in epidemiologic studies of working populations. It describes the historical development of occupational epidemiology, the approaches to characterizing workplace exposures, and the methods for designing and implementing epidemiologic studies. The relative strengths and limitations of different study designs are emphasized. Also included are more advanced discussions of statistical analysis, the estimation of doses to biological targets, and applications of the data derived from occupational epidemiology studies to disease modeling and risk assessment. The volume will serve both as a textbook in epidemiology and occupational medicine courses and as a practical handbook for the design, implementation, and interpretation of research in this field.

Multivariate Methods in Epidemiology Theodore R. Holford, 2002-05-30 This text describes the statistical tools that are currently used to analyse epidemiologic data on the association between possible risk factors and the actual risk of disease.

Lilienfeld's Foundations of Epidemiology Dona Schneider, David E. Lilienfeld, 2015-08-06 Two decades after the third edition of Lilienfeld's *Foundations of Epidemiology* advanced the teaching of epidemiology, this completely revised fourth edition offers a new and innovative approach for future generations of students in population health.

Biostatistics Gerald van Belle, Lloyd D. Fisher, Patrick J. Heagerty, Thomas Lumley, 2004-10-06 A respected introduction to biostatistics, thoroughly updated and revised. The first edition of *Biostatistics: A Methodology for the Health Sciences* has served professionals and students alike as a leading resource for learning how to apply statistical methods to the biomedical sciences. This substantially revised Second Edition brings the book into the twenty

first century for today's aspiring and practicing medical scientist. This versatile reference provides a wide ranging look at basic and advanced biostatistical concepts and methods in a format calibrated to individual interests and levels of proficiency. Written with an eye toward the use of computer applications, the book examines the design of medical studies, descriptive statistics, and introductory ideas of probability theory and statistical inference. It explores more advanced statistical methods and illustrates important current uses of biostatistics. New to this edition are discussions of Longitudinal data analysis, Randomized clinical trials, Bayesian statistics, GEE, The bootstrap method. Enhanced by a companion Web site providing data sets, selected problems and solutions, and examples from such current topics as HIV/AIDS, this is a thoroughly current comprehensive introduction to the field.

Textbook of Cancer Epidemiology Hans-Olov Adami, David John Hunter, Dimitrios Trichopoulos, 2002. This superb text offers an overview of the epidemiology and primary prevention for most forms of human cancer. It summarizes concepts and methods of epidemiology, the biology of cancer, cancer genetics, and the emerging potential of biomarkers. Then it reviews specific cancer sites in a consistent way, providing clinical and pathological outlines, descriptive epidemiology, and a comprehensive account of traditional and molecular risk factors and their etiological importance.

Statistical Methods in Epidemiology Harold A. Kahn, Christopher T. Sempos, 1989. This book is an expanded version of the Kahn's widely used text, *An Introduction to Epidemiologic Methods* (Oxford, 1983). It provides clear insight into the basic statistical tools used in epidemiology and is written so that those without advanced statistical training can comprehend the ideas underlying the analytical techniques. The authors emphasize the extent to which similar results are obtained from different methods, both simple and complex. To this edition, they have added a new chapter on Comparison of Numerical Results for Various Methods of Adjustment, and also one on The Primacy of Data Collection. New topics include the Kaplan-Meier product limit method and the Cox proportional hazards model for analysis of time-related outcomes. An appendix of data from the Framingham Heart Study is used to illustrate the application of various analytical methods to an identical set of real data and provides source material for student exercises. The text has been updated throughout.

Clinical Trials Curtis L. Meinert, 2012-03-27. The classic definitive guide to the design, conduct, and analysis of randomized clinical trials.
