Bruce M. Carlson, MD, PhD

Developmental Biology Of Peripheral Lymphoid Organs:

Developmental Biology of Peripheral Lymphoid Organs Peter Balogh, 2010-11-04 The human immune system is a complex network of tissues and organs dispersed throughout the body Immunology as one of the most rapidly evolving fields in bio medical research has to date covered the essential cellular and molecular events necessary for immune responses to occur However it has paid relatively little attention to important developmental processes underlying the formation of the tissues themselves that carry out immune responses in humans and other mammalians In contrast to the thymus and bone marrow that are the sole tissues for generating mature leukocytes for antigen recognition and handling in humans and most mammalian species the peripheral lymphoid tissues where adaptive immune responses are focused display broad tissue distribution and possess diverse architectural characteristics These organs develop prior to the individual's exposure to external antigens and despite their similar functions their varied appearances indicate a substantial complexity of tissue ontogeny This volume presents a comprehensive overview of the developmental features of the major peripheral lymphoid organs thus examining the connection between immunological functionality and structural characteristics utilizing a developmental approach for an audience ranging from undergraduate students to senior researchers in immunology histology and clinical medicine

Immunology and Developmental Biology of the Chicken Olli Vainio, Beat A. Imhof, 2012-12-06 The chicken is a useful model for research into the basic features of immunology because its immune system functions in a way similar to that of human beings and because the chicken embryo is easily accessed experimentally This book is a collection of comprehensive articles updating chicken embryogenesis and immunology It is now clear that it is possible to produce transgenic chickens by embryonic stem cell manipulation and transfer into the oocyte Alternatively the chick offers us the possibility of producing somatic chimeras by manipulating embryonic cells at the primitive streak or earlier stages Working with later embryos we can learn the principles involved in the positioning of organ anlagen such as the limb bud It is shown in this book that these structures are formed by appropriate cell and tissue arrangements driven by molecular factors Work on the chicken has contributed substantially to our understanding of basic immunology including the graft vs host reaction the clonal reactivity of immunocompetent cells separation of the T and B cell lineages somatic diversification of the B cell repertoire by immunoglobulin Ig class switching antibody diversification Ig gene conversion and the origin of the hematopoietic stem cell precursor of lymphoid and myeloid cells Hematopoietic stem cells emerge successively from several

embryonic sites such as the yolk sac the aorta and the mesentery near the aorta Human Embryology and Developmental Biology Bruce M.
