Cad/CAM Lab Manual Sathish D, 2018-06-26 Computer aided design CAD involves creating computer models defined by geometrical parameters. These models typically appear on a computer monitor as a three dimensional representation of a part or a system of parts which can be readily altered by changing relevant parameters. CAD systems enable designers to view objects under a wide variety of representations and to test these objects by simulating real world conditions. Computer aided manufacturing CAM uses geometrical design data to control automated machinery. CAM systems are associated with computer numerical control CNC or direct numerical control DNC systems. These systems differ from older forms of numerical control NC in that geometrical data are encoded mechanically. Since both CAD and CAM use computer based methods for encoding geometrical data, it is possible for the processes of design and manufacture to be highly integrated.

Computer aided design and manufacturing systems are commonly referred to as CAD CAM **CNC SIMPLIFIED, Lab Manual** Arthur Gill, Peter Smid, Steve Krar, Stephen F. Computer Aided Design J. Encarnacao, E. G. Schlechtendahl, 2012-12-06 4.1 Introduction and optimization. These are essential constituents of the iterative process leading to a feasible and one hopes optimal design. 1.3 Content of the Book. In Chapter 2 we present briefly the history of CAD. The main components of CAD systems are identified and their principal functions described. Economical and interdisciplinary aspects are discussed. Chapter 3 starts with a systems analysis of the design process. The notion of a process is introduced as a fundamental tool to describe activities like design as a whole, computer aided design, program executions, terminal sessions, etc. The environment and the resources which the environment must supply for the successful execution of any process are discussed. The problem of modelling the design objects in an abstract schema and the interrelation between the schema and the planning of the individual step in the design are analysed. Chapter 4 concentrates on the interfaces among the components of a CAD system, including the human operator. The problem of mapping an abstract schema onto the capabilities of various programming command or data description languages is described in detail. Emphasis is laid upon the resource aspect and its influence on the design of CAD systems. The concept of a
