Computer Vision Systems Computer Vision Systems:

Computer Vision Systems Allen Hanson, 1978-01-01 Computer Vision Systems is a collection of papers presented at the Workshop on Computer Vision Systems held at the University of Massachusetts in Amherst Massachusetts on June 1 3 1977 Contributors discuss the breadth of problems that must be taken into account in the development of general computer vision systems Topics covered include the application of system engineering techniques to the design of artificial intelligence systems representation and segmentation of natural scenes and pragmatic aspects of machine vision Psychophysical measures of representation and interpretation are also considered This monograph is divided into four sections Issues and Research Strategies Segmentation Theory and Psychology and Systems The first chapter explores the problem of recovering the intrinsic characteristics of scenes from images along with its implications for machine and human vision The discussion then turns to special purpose low level vision systems that can be flexibly reconfigured as the need arises design development and implementation of large systems from the human engineering point of view and representation of visual information The next section examines hierarchical relaxation for waveform parsing the topology and semantics of intensity arrays and visual images as spatial representations in active memory The use of edge cues to recognize real world objects is also analyzed This text will be a useful resource for systems designers computer engineers and scientists as well as psychologists

Vision as Process James L. Crowley, Henrik I. Christensen, 1994-12-19 Human and animal vision systems have been driven by the pressures of evolution to become capable of perceiving and reacting to their environments as close to instantaneously as possible Casting such a goal of reactive vision into the framework of existing technology necessitates an artificial system capable of operating continuously selecting and integrating information from an environment within stringent time delays The YAP Vision As Process project embarked upon the study and development of techniques with this aim in mind Since its conception in 1989 the project has successfully moved into its second phase YAP II using the integrated system developed in its predecessor as a basis During the first phase of the work the vision as a process paradigm was realised through the construction of flexible stereo heads and controllable stereo mounts integrated in a skeleton system SAV demonstrating continuous real time operation It is the work of this fundamental period in the VAP story that this book aptly documents Through its achievements the consortium has contributed to building a strong scientific base for the future development of continuously operating machine vision systems and has always underlined the importance of not just solving problems of purely theoretical interest but of tackling real world scenarios Indeed the project members should now be well poised to contribute and take advantage of industrial applications such as navigation and process control and already the commercialisation of controllable heads is underway
