1. Know assessment question in lethality assessment

- a. The most validated and used instrument to assess for safety is the tool developed by Campbell (1985), the lethality assessment tool. It is a 20-item tool available on the internet in English, Spanish, Portuguese, and French Creole, and recent analyses indicate it has high sensitivity (92% to 93%) and predictive value (93% to 96%). Campbell developed this instrument to identify women at risk of being murdered by their intimate partners. It often heightens a woman's awareness about her safety. Once the safety issues are identified, the healthcare provider can present intervention options to the client.

DANGER ASSESSMENT Josephine C. Campbell, PhD, RN Copyright © 1995, 1998, 2005	
Several risk factors have been associated with homicides (murders) of both husbands and battered women in research conducted after the murders have taken place. We cannot predict what will happen in your case, but we would like you to be aware of the danger of homicide in situations of severe battering and for you to see how many of the risk factors apply to your situation.
