Advanced DC/DC Converters Fang Lin Luo, Hong Ye, 2016-12-08 DC DC conversion techniques have undergone rapid development in recent decades. With the pioneering work of authors Fang Lin Luo and Hong Ye, DC DC converters have now been sorted into their six generations and by a rough count over 800 different topologies currently exist, with more being developed each year. *Advanced DC DC Converters, Second Edition* offers a concise practical presentation of DC DC converters, summarizing the spectrum of conversion technologies and presenting new ideas and more than 200 new topologies. Beginning with background material on DC DC conversion, the book later discusses both voltage lift and super lift converters. It then proceeds through each generation, including the groundbreaking sixth generation converters developed by the authors that can be cascaded for high voltage transfer gain. This new edition updates every chapter and offers three new chapters. The introduction of the super lift technique is an outstanding achievement in DC DC conversion technology, and the ultra lift technique and hybrid split capacitor inductor applied in Super Lift Luo Converters are introduced in Chapters 7 and 8. In Chapter 9, the authors have theoretically defined a new concept, Energy Factor (EF), researched the relations between EF and the mathematical modelling for power DC DC converters, and demonstrated the modeling method for two converters. More than 320 figures, 60 tables, and 500 formulae allow the reader to more easily grasp the overall structure of advanced DC DC converters, provide fast access to precise data, and help them to quickly determine the values of their own circuit components.

Non-Isolated DC-DC Converters for Renewable Energy Applications Frede Blaabjerg, Mahajan Sagar Bhaskar, Sanjeevikumar Padmanaban, 2021-04-22 Photovoltaic (PV) energy generation is an excellent example of large

scale electric power generation through various parallel arrangements of small voltage generating solar cells or modules. However, PV generation systems require power electronic converters system to satisfy the need for real time applications or to balance the demand for power from electric. Therefore, a DC/DC power converter is a vital constituent in the intermediate conversion stage of PV power. This book presents a comprehensive review of various non-isolated DC/DC power converters. Non-isolated DC/DC converters for renewable energy system (RES) application presented in this book (1st edition) through a detailed original investigation obtained numerical experimental results and guided the scope to design new families of converters: DC/DC multistage power converter topologies: Multistage X/Y converter family, N_x IMBC, N_x Interleaved Multilevel Boost Converter, Cockcroft-Walton (CW) Voltage Multiplier Based Multistage Multilevel Power Converter, CW-VM-MPC converter topologies and Z-source and quasi-Z-source. Above solutions are discussed to show how they can achieve the maximum voltage conversion gain ratio by adapting the passive-active component within the circuits. For assessment, we have recommended novel power converters through their functionality and designs tested and verified by numerical software. Further, the hardware prototype implementation is carried out through a flexible digital processor. Both numerical and experimental results always shown as expected close agreement with primary theoretical hypotheses. This book offers guidelines and recommendation for future development with the DC/DC converters for RES applications based on cost-effective and reliable solutions.
