[THE START OF UNIVERSAL MOTION](#), 2024-08-10 This model explores the formation of hydrogen and other matter in a universe where each galaxy forms in its current location undergoing its own nucleosynthesis events and eventually collapsing into near zero Kelvin black holes The model integrates the interaction of static gravitational fields the influence of the strong nuclear force and the potential human role in initiating motion in the universe Gravitational Instability and the Creation of the CMB Gravitational instability caused by the interaction of two static gravitational fields leads to the creation of the Cosmic Microwave Background CMB This interaction is driven by the strong nuclear force acting on Einstein Bose condensates against a near zero Kelvin background The resulting phonons or photons of the CMB are a manifestation of this powerful interaction The Role of the CMB The CMB represents the heat generated from these interactions and marks the beginning of expansion in localized regions This localized expansion leads to the formation of dust particles which eventually coalesce to form stars galaxies planets moons and other celestial objects in their current locations Hydrogen Production and Galactic Nucleosynthesis In this steady state universe each galaxy undergoes its own nucleosynthesis events creating hydrogen and other elements These events are comparable to mini Big Bangs occurring due to gravitational collapses and subsequent explosive releases of energy Over time galaxies cycle through phases of matter creation and collapse into near zero Kelvin black holes maintaining the dynamic equilibrium of the universe Matter Antimatter and Dark Matter The survival of matter over antimatter is attributed to the attractive forces in the universe such as gravity electromagnetism and the weak nuclear force These forces ensure that matter with its attractive properties dominates over antimatter which is repulsive in nature Dark matter in this model is hypothesized to consist of helium particles left over from past cosmic cycles given helium's inability to freeze Human Initiated Motion The theory also entertains the idea that humans might have initiated motion in the universe The creation of a Higgs boson muon or similar particle could theoretically travel back in time triggering gravitational instability and initiating the motion that led to the formation of the universe This speculative idea underscores the interconnectedness of humans and the cosmos suggesting that our actions may influence the very fabric of the universe Conclusion This revised model presents a steady state universe where localized Big Bang like events drive the creation of hydrogen and other matter and where gravitational instability influenced by the strong nuclear force generates the CMB It incorporates the potential role of human activity in initiating cosmic motion blending established scientific principles with innovative hypotheses to explore the origins and dynamics of the universe
