1. Introduction

The Global Strategy for the Diagnosis, Management and Prevention of COPD guidelines (GOLD, 2010) and the UK National Institute of Clinical Excellence guidelines (NICE, 2010) recommend an early diagnosis of Chronic Obstructive Pulmonary Disease (COPD) in any patient over the age of 35 who has chronic cough (present intermittently or every day throughout the day), chronic sputum production, shortness of breath (dyspnoea), frequent winter 'bronchitis' or wheeze and/or a history of exposure to disease risk factors.

COPD is a progressive, but preventable and treatable disease, characterised by airflow limitation, that is not fully reversible and an abnormal inflammatory response of the lungs to noxious particles or gases; COPD is associated with significant extrapulmonary effects and comorbidities that may affect the severity (GOLD, 2010). COPD is a complex disease, a combination of emphysema and chronic bronchitis, although only one of these may be present in some people.

- Emphysema is characterized by abnormal permanent enlargement of the air spaces distal to the terminal bronchioles, accompanied by destruction of their walls, and without obvious fibrosis.
- Chronic bronchitis is characterized by chronic cough or mucous production for at least 3 months in at least 2 successive years when other causes of chronic cough have been excluded (GOLD, 2010).

The typical symptoms are cough, with large amounts of mucus, wheezing, shortness of breath, chest tightness. Cigarette smoking is the leading cause of COPD. It is estimated that over 50% of smokers will develop during the life a chronic respiratory disease (Mannino & Buist, 2007). Other than tobacco smoking, risk factors for development of COPD are being

Copd In Primary Care Chronic Diseases In Primary Care:

Chronic Obstructive Pulmonary Disease in Primary Care Margaret Barnett, 2006-05-12 Until recently COPD was largely neglected by health professionals and viewed as the Cinderella of respiratory conditions. Many patients were seen as heart sink cases with a self-inflicted disease. But views are now changing and COPD like other chronic conditions managed within primary care has taken on a higher profile within the Government and NHS agenda. This book reflects that change. It looks at the treatment of COPD in primary care in the GP surgery in outpatient clinics and through district and community nursing. COPD management does not depend on purely medical intervention; much can be done to help these patients from a psychological, social and holistic perspective to cope with their everyday activities. Patients lead a frightening existence struggling to breathe and to cope with their symptoms. The book helps nurses and other healthcare professionals to support these patients. COPD in Primary Care Anita Sharma, Penney Vasey, 2018-05-08

The burden of chronic obstructive pulmonary disease (COPD) is enormous and is increasing, but early accurate diagnosis in a primary care setting can have a crucial impact on managing the condition. New NICE guidelines and the GMS Contract with incentives give GPs and practice nurses the opportunity to diagnose COPD patients and manage them in a structured fashion. This book brings together clear and concise information for GPs and primary healthcare teams on how this can be achieved accurately and effectively. This book sets out a very practical approach to caring for one group who can demonstrably benefit from access to the very best that primary care can offer patients living with COPD. This book is for busy primary care physicians and nurses committed to improving diagnosis, enabling self-management, ensuring rapid treatment and providing truly patient-centred care. Written by an experienced practising general practitioner, it provides a timely contribution to the high quality primary care services needed now and in the future. A from the Foreword by Gail Richards. Anita Sharma is to be congratulated on producing a clear, concise and practical book on COPD which will educate, give confidence to and encourage primary care physicians to manage this important disease effectively and at an early stage. A from the Foreword by Joyce Barclay. **Chronic**

Morbidity, Performance and Quality in Primary Care Gert P. Westert, Lea Jabaaij, François G. Schellevis, 2006 This book is based on the findings of a nationwide study the aim of which was to analyse general practitioners performance as gatekeepers of the Dutch healthcare system The study was undertaken along six themes the health of the population inequalities in health utilisation of care quality of care communication organisation and workload Morbidity Performance and Quality in Primary Care involves 400 000 patients 1 5 million recorded GP patient contacts and 2 1 million drug prescriptions This survey appears at a timely moment It coincides with the recent interest in primary care arising not only from the growing importance of cost containment in healthcare but also from the now firmly established association between the life expectancy of a population and the existence of a strong primary care sector The international interest in the Dutch situation is reflected in several chapters where experts from all over the world put Dutch general practice into an international perspective
