Modern European Buildings Francis Rowland Yerbury, 1928 Building a European Identity Aurélie Élisabeth Gfeller, 2012-07-20 The Arab Israeli war of 1973 the first oil price shock and France's transition from Gaullist to centrist rule in 1974 coincided with the United States attempt to redefine transatlantic relations As the author argues this was an important moment in which the French political elite responded with an unprecedented effort to construct an internationally influential and internally cohesive European entity Based on extensive multi archival research this study combines analysis of French policy making with an inquiry into the evolution of political language highlighting the significance of the new concept of a political European identity **Tall Buildings of Europe, Middle East & Africa** Georges Binder, 2006 Complete reference book beautifully illustrated of the world's tall buildings **Building Europe** Wilfried Loth, 2015-08-31 Relying on internal sources Wilfried Loth analyses the birth and subsequent development of the European Union from the launch of the Council of Europe and the Schuman Declaration until the Euro crisis and the contested European presidential election of Jean Claude Juncker This book shines a light on the crises of the European integration such as the failure of the European Defence Community De Gaulle's empty chair policy or the rejection of the European Constitution in France and the Netherlands but also highlights the indubitable successes that are the Franco German reconciliation the establishment of the European common market and the establishment of an expanding common currency What this study accomplishes for the first time is to illuminate the driving forces behind the European integration process and how it changed European politics and society An enlightening work A required reading for all who doubt the unfinished history of Europe Rolf Steininger Frankfurter Allgemeine Zeitung This book will become an indispensable standard work Jörg Himmelreich Neue Zürcher Zeitung **Embodied Carbon in Buildings** Francesco Pomponi, Catherine De Wolf, Alice Moncaster, 2018-01-28 This book provides a single source reference for whole life embodied impacts of buildings The comprehensive and persuasive text written by over 50 invited experts from across the world offers an indispensable resource both to newcomers and to established practitioners in the field Ultimately it provides a persuasive argument as to why embodied impacts are an essential aspect of sustainable built environments The book is divided into four sections measurement including a strong emphasis on uncertainty analysis as well as offering practical case studies of individual buildings and a comparison of materials management focusing in particular on the perspective of designers and contractors mitigation which identifies some specific design strategies as well as challenges and finally global approaches six chapters which describe in authoritative detail the ways in which the different regions of the world are tackling the issue *Building European Union* Trevor C. Sacred Buildings Rudolf Stegers, 2008-05-16 The building of religious structures represents a rare opportunity for the architect to concentrate on the creation of volume space and form Sacred architecture is far less determined than other building tasks by functional requirements norms and standards As a rule it is free to unfold as pure architecture Thus in design terms this building task offers enormous freedoms to the architect At the same time however the special atmospheres of sacred spaces call on the part of the architect for a highly sensitive treatment of religion and the relevant cultural and architectural traditions In a systematic section this volume introduces the design technical and planning fundamentals of building churches synagogues and mosques In its project section it also presents about seventy realized structures from the last three decades Drawing upon his in depth knowledge of the subject and his many years of publishing experience the author offers a valuable analysis of the conceptual and formal aspects that combine to create the religious impact of spaces e g the ground plan the shapes of the spaces the incidence of light and materiality

Planning Europe's Capital Cities Thomas Hall, 2003-12-16 During the nineteenth century many of Europe's capital cities were subject to major expansion and improvement schemes From Vienna's Ringstrasse to the boulevards of Paris the townscapes which emerged still shape today's cities and are an inalienable part of European cultural heritage In *Planning Europe's Capital Cities* Thomas Hall examines the planning process in fifteen of those cities and addresses the following questions when and why did planning begin and what problems was it meant to solve who developed the projects and how and who made the decisions what urban ideas are expressed in the projects what were the legal consequences of the plans and how did they actually affect subsequent urban development in the individual cities what similarities or differences can be identified between the various schemes how have such schemes affected the development of urban planning in general His detailed analysis shows us that the capital city projects of the nineteenth century were central to the evolution of modern planning and of far greater impact and importance than the urban theories and experiments of the Utopians
