Catalysis Without Precious Metals 2010 10 18:

Metal Clusters and Their Reactivity Zhixun Luo, Shiv N. Khanna, 2020-10-31 This book discusses current techniques and instrumentation for cluster chemistry. It addresses both the experimental and theoretical aspects of gas phase metal cluster reactivities especially those pertaining to pollution removal, energetic reactions and corrosion and anticorrosion. These metal cluster systems have attracted enormous interest as they display a completely new class of physical, chemical, electronic, magnetic and catalytic properties. As these properties change with size and composition, it can thus be understood how their nature evolves from atoms to bulk solids. The book offers readers a basic understanding of the structural chemistry and reactivity of metal clusters in both gas phase and wet chemistry. Further, the lessons they learn here regarding metal cluster chemistry will prepare researchers for the study of condensed phase dynamics that pertain to wet chemical synthesis, soft landing, deposition and cluster assembly.

Hydrogenation with Low-Cost Transition Metals Jacinto Sa, Anna Srebowata, 2018-10-08 Hydrogenation with Low Cost Transition Metals describes recent developments in the preparation of catalysts and their catalytic abilities in chemoselective hydrogenation for the production of fine chemicals and pharmaceutical compounds. Emphasizing the use of low cost metals Cu, Ni, Fe and Ag that are often present in the form of nanoparticles, the book provides valuable reaction mechanism schemes, engineering solutions and perspective for the field.

Pincer Compounds David Morales-Morales, 2018-04-11 Pincer Compounds: Chemistry and Applications offers valuable state of the art coverage highlighting highly active areas of research from mechanistic work to synthesis and characterization. The book focuses on small molecule activation chemistry, particularly H₂ and hydrogenation, earth abundant metals such as Fe, actinides, carbene pincers, chiral catalysis and alternative solvent usage. The book covers the current state of the field featuring chapters from renowned contributors covering four continents and ranging from still active pioneers to new names emerging as creative strong contributors to this fascinating and promising area. Over a decade since the publication of Morales, Morales and Jensen's *The Chemistry of Pincer Compounds* Elsevier 2007, research in this unique area has flourished, finding a plethora of applications in almost every single branch of chemistry from their traditional application as very robust and active catalysts all the way to potential biological and pharmaceutical applications. Describes the chemistry and applications of this important class of organometallic and coordination compounds. Includes contributions from global leaders in the field featuring pioneers in the area as well as emerging experts conducting exciting research on pincer complexes. Highlights areas of promising and active research including small molecule activation, earth abundant metals and actinide chemistry.

Dehydrogenation Reactions with 3d Metals Basker Sundararaju, 2024-01-06 In this book, recent developments in dehydrogenation reactions catalyzed by 3d metals are discussed. With continued efforts to develop sustainable chemical production, the discovery of new catalysts and catalytic procedures for dehydrogenation reactions are a

subject of great interest to the chemistry community. Additionally, dehydrogenation reactions enable the creation of closed loop production cycles that support a circular economy. The chapters presented include the synthesis of heterocycles and tandem multicomponent three or more reactions through dehydrogenative strategy as well as the conversion of ethanol to n-butanol, higher oxidized hydrocarbons like acids, esters, amides from alcohols, alkylation of amines, ketones and amides with alcohols, and mechanistic understanding of dehydrogenation reactions with high valent metals. With contributions from experts in the field, the book is a valuable resource for scholars working in the field of organometallic chemistry, catalysis, medicinal chemistry as well as researchers in the industry.

Advances in Organometallic Chemistry, 2024-05-23. *Advances in Organometallic Chemistry* Volume 81 in this ongoing series highlights new advances in the field with this new volume presenting interesting chapters written by an international board of authors. Sustainable Synthesis of Pharmaceuticals Mariette M. Pereira, Mario J. F. Calvete, 2018-03-26. *Catalysis by Precious Metals, Past and Future* Marcela Martinez Tejada, Svetlana Ivanova, 2020-04-15. The future of the precious metals is shiny and resistant. Although expensive and potentially replaceable by transition metal catalysts, precious metal implementation in research and industry shows potential. These metals catalyze oxidation and hydrogenation due to their dissociative behavior toward hydrogen and oxygen, dehydrogenation, isomerization, and aromatization, etc. The precious metal catalysts, especially platinum-based catalysts, are involved in a variety of industrial processes. Examples include Pt/Rh gauze for nitric acid production, the Pt/Al₂O₃ catalyst for cyclohexane and propylene production, and Pd/Al₂O₃ catalysts for petrochemical hydropurification reactions, etc. A quick search of the number of published articles in the last five years containing a combination of corresponding metals Pt, Pd, Ru, Rh, and Au and catalysts as keywords indicates the importance of the Pt catalysts but also the continuous increase in the contribution of Pd and Au. This Special Issue reveals the importance of precious metals in catalysis and focuses on mono and bimetallic formulations of any supported precious metals and their promotional catalytic effect of other transition metals. The application of precious metals in diverse reactions, either homogeneous or heterogeneous, and studies of the preparation, characterization, and applications of the supported precious metal catalysts are presented.

Homogeneous Hydrogenation and Metathesis

Reactions Mohammad Reza Rahimpour, Mohammad Amin Makarem, Tayebah Roostaie, Maryam Meshksar, 2024-09-18
