Technologies Joao P. Ponte, 1992-08-11 A strong and fluent competency in mathematics is a necessary condition for scientific technological and economic progress However it is widely recognized that problem solving reasoning and thinking processes are critical areas in which students performance lags far behind what should be expected and desired Mathematics is indeed an important subject but is also important to be able to use it in extra mathematical contexts Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues This book includes the revised papers presented at the NATO ARW Information Technology and Mathematical Problem Solving Research held in April 1991 in Viana do Castelo Portugal which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities In recent years several committees professional associations and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula all emphasizing the importance of problem solving In order to be successful these reforming intentions require a theory driven research base But mathematics problem solving may be considered a chaotic field in which progress has been quite slow Teacher Education Programs and Online Learning Tools: Innovations in Teacher Preparation

Hartshorne, Richard, Heafner, Tina L., Petty, Teresa, 2012-07-31 While online learning has become pervasive in many fields in higher education it has been adopted somewhat slower in teacher education In addition more research is needed to empirically evaluate the effectiveness of online education in teacher preparation Teacher Education Programs and Online Learning Tools Innovations in Teacher Preparation presents information about current online practices and research in teacher education programs and explores the opportunities methods and issues surrounding technologically innovative opportunities in teacher preparation It presents empirical evidence of teacher candidate learning and assessment in the context of various online aspects of teacher licensure *STEM Education: Concepts, Methodologies, Tools, and Applications*

Zaporozhets, 2024-11-25 This book considers the issues of constructing mathematical probabilistic models of diagnostic

signals the development of statistical methods of their analysis in order to make diagnostic decisions and finally the technical implementation of the proposed diagnostic methods Following the concept of primacy of the mathematical model of the diagnostic signal the authors considered it expedient to consider first of all the questions connected with the theory of random processes possessing infinitely divisible distribution laws linear and linear periodic random processes Considerable attention is paid to the issues of simulation modeling of diagnostic signals and their statistical evaluation Modern element base and new information technologies allowed to develop build and practically test a number of experimental samples of information measuring systems of statistical diagnostics of electric power engineering objects Among these IMS the systems are realized by means of unmanned diagnostic complexes and also IMS of vibrodiagnostics of moving units of electric machines represents an important role A large amount of experimental research has shown the operability and efficiency of the built IMS samples Particular attention is paid to the selection of diagnostic spaces formation of training sets construction of solving rules for diagnosis and classification of EE defects The authors do not pretend to a comprehensive consideration of the issues of EE diagnostics using statistical methods and IMS realized on their basis At the same time the results of researches stated in this monograph were a natural continuation of the subject of application of statistical methods in the field of control monitoring and diagnostics for objects of electric power industry
