Comfort In A Lower Carbon Society Building Research And Information:

Comfort in a Lower Carbon Society Elizabeth Shove, Heather Chappells, Loren Lutzenhiser, 2013-09-13 Current expectations and standards of comfort are almost certainly unsustainable and new methods and ideas will be required if there is to be any prospect of a significantly lower carbon society This collection reassesses relationships between people and the multitude of environments they inhabit in the context of increasing carbon intensities of everyday life In this bold and unconventional volume historians sociologists environmentalists geographers and cultural theorists provoke and stimulate debate about the future of comfort in a lower carbon society These contributions are then subject to critical commentary from a range of academic and policy perspectives The result is a book that promotes academic and policy discussion of the environmental consequences of indoor climate change around the world and that offers new perspectives and strategies for moving towards a lower carbon future This book was published as a special issue of Building Research Information

Carbon Management in the Built Environment Rohinton Emmanuel, Keith Baker, 2012-07-26 Three broad sectors of the economy are generally recognized as key to a low carbon future energy construction and transportation Of these carbon management in the built environment remains the least well studied This much needed book brings together the latest developments in the field of climate change science building design materials science energy and policy in a form readily accessible to both students of the built environment and practitioners Although several books exist in the broad area of carbon management this is the first to bring together carbon management technology technique and policy as they apply to the building sector Clear and succinct sections on the overarching principles policies approaches and technologies are combined with case studies and more in depth coverage of the most relevant topics It explains how to produce a simple carbon footprint calculation while also being an informative guide for those developing or implementing more advanced approaches This easy to read book is the ideal primer for anyone needing to get to grips with carbon management in the built environment

Housing Sustainability in Low Carbon Cities Ralph Horne, 2017-09-08 Housing affordability urban development and climate change responses are great challenges that are intertwined yet the conceptual and policy links between them remain under developed Housing Sustainability in Low Carbon Cities addresses this gap by developing an interdisciplinary approach to urban decarbonisation drawing upon more established yet quite distinctive fields of built environment policy and design housing and studies of social and economic change Through this approach policy and practices of housing affordability equity energy efficiency resilience and renewables are critiqued and alternatives are presented Drawing upon international case studies this book provides a unique contribution to interdisciplinary urban and housing studies discourses and practices in an era of climate change This book is recommended reading on higher level undergraduate and taught postgraduate courses in architecture urban studies planning built environment geography and urban studies It will also be directly valuable to housing and urban policy makers and sustainability practitioners **The**

Recovery of Natural Environments in Architecture C. Alan Short, 2017-01-20 The Recovery of Natural Environments in Architecture challenges the modern practice of sealing up and mechanically cooling public scaled buildings in whichever climate and environment they are located This book unravels the extremely complex history of understanding and perception of air bad air miasmas airborne pathogens beneficial thermal conditions ideal climates and climate determinism It uncovers inventive and entirely viable attempts to design large buildings hospitals theatres and academic buildings through the 19th and early 20th centuries which use the configuration of the building itself and a shrewd understanding of the natural physics of airflow and fluid dynamics to make good comfortable interior spaces In exhuming these ideas and reinforcing them with contemporary scientific insight the book proposes a recovery of the lost art and science of making naturally conditioned buildings

Natural Resources and Sustainability Daniel E. Vasey, Sarah E. Fredericks, Lei Shen, Shirley Thompson, 2011-12-08 Natural Resources and Sustainability explores how human needs and desires from sustenance and shelter to recreation and travel have spurred the consumption of Earth's material resources Scientists ecologists and other expert authors present the historical impact of commercial activities in industries as varied as fisheries agriculture energy and mineral extraction discuss the global distribution and use of renewable and nonrenewable resources and focus on innovative approaches for the future Readers will learn why renewal doesn't necessarily put a resource beyond harm and why the no free lunch adage applies to all natural resources

Architecture & Sustainable Development (vol.1) Magali Bodart, Arnaud Evrard, 2011-07 This book of Proceedings presents the latest thinking and research in the rapidly evolving world of architecture and sustainable development through 255 selected papers by authors coming from over 60 countries

Ergonomics in Design Marcelo M. Soares, Francisco Rebelo, 2016-09-19 Currently people deal with various entities such as hardware software buildings spaces communities and other people to meet specific goals while going about their everyday activities in work and leisure environments These entities have become more and more complex and incorporate functions that hitherto had never been allocated such as automation use in virtual environments connectivity personalization mobility and friendliness This book contributes to the analysis of human system interactions from the perspective of ergonomics regardless of how simple or complex they are while incorporating the needs of users and workers in a healthy safe efficient and enjoyable manner This book provides a comprehensive review of the state of the art of current ergonomic in design methods and techniques that are being applied to products machinery equipment workstations and systems while taking new technologies and their applications into consideration Ergonomics in Design Methods and Techniques is organized into four sections and 30 chapters covering topics such as conceptual aspects of ergonomics in design the knowledge of human characteristics applied to design and the methodological aspects of design Examples are shown in several areas of design including but not limited to consumer products games transport education architecture fashion sustainability biomechanics intelligent systems virtual reality and neurodesign This book will Introduce the newest

developments in social cultural approaches Shows different ergonomics in design methodological approaches Divulges the ways that ergonomics can contribute to a successful design Applies different subjects to support the design including ergonomics engineering architecture urbanism neuro and product designs Presents recent technologies in ergonomic design as applied to product design With the contributions from a team of 75 researchers from 11 countries the book covers the state of the art of ergonomics in a way to produce better design Low-tech Magazine 2012-2018 Kris De Decker,2019-03-18 Low tech Magazine underscores the potential of past and often forgotten technologies and how they can inform sustainable energy practices Sometimes past technologies can be copied without any changes More often interesting possibilities arise when older technology is combined with new knowledge and new materials or when past concepts and traditional knowledge are applied to modern technology Inspiration is also to be found in the so called developing world where resource constraints often lead to inventive low tech solutions **International Journal of Business Anthropology Volume 6 (1)** Robert Guang Tian,2016-05-11 This journal has been discontinued Any issues are available to purchase separately **The Oxford Handbook of the History of Consumption** Frank Trentmann,2012-03-22 The term consumption covers the desire for goods and services their acquisition use and disposal The study of consumption has grown enormously in recent years and it has been the subject of major historiographical debates did the eighteenth century bring a consumer revolution Was there a great divergence between East and West Did the twentieth century see the triumph of global consumerism Questions of consumption have become defining topics in all branches of history from gender and labour history to political history and cultural studies The Oxford Handbook of the History of Consumption offers a timely overview of how our understanding of consumption in history has changed in the last generation taking the reader from the ancient period to the twenty first century It includes chapters on Asia Europe Africa and North America brings together new perspectives highlights cutting edge areas of research and offers a guide through the main historiographical developments Contributions from leading historians examine the spaces of consumption consumer politics luxury and waste nationalism and empire the body well being youth cultures and fashion The Handbook also showcases the different ways in which recent historians have approached the subject from cultural and economic history to political history and technology studies including areas where multidisciplinary approaches have been especially fruitful
