Data Mining and Machine Learning in Cybersecurity Sumeet Dua,Xian Du,2016-04-19 With the rapid advancement of information discovery techniques machine learning and data mining continue to play a significant role in cybersecurity Although several conferences workshops and journals focus on the fragmented research topics in this area there has been no single interdisciplinary resource on past and current works and possible **Machine Learning and Data Mining for Computer Security** Marcus A. Maloof,2006-02-27 Machine Learning and Data Mining for Computer Security provides an overview of the current state of research in machine learning and data mining as it applies to problems in computer security This book has a strong focus on information processing and combines and extends results from computer security The first part of the book surveys the data sources the learning and mining methods evaluation methodologies and past work relevant for computer security The second part of the book consists of articles written by the top researchers working in this area These articles deals with topics of host based intrusion detection through the analysis of audit trails of command sequences and of system calls as well as network intrusion detection through the analysis of TCP packets and the detection of malicious executables This book fills the great need for a book that collects and frames work on developing and applying methods from machine learning and data mining to problems in computer security *Machine Learning for Computer and Cyber Security* Brij B. Gupta,Quan Z. Sheng,2019-02-05 While Computer Security is a broader term which incorporates technologies protocols standards and policies to ensure the security of the computing systems including the computer hardware software and the information stored in it Cyber Security is a specific growing field to protect computer networks offline and online from unauthorized access botnets phishing scams etc Machine learning is a branch of Computer Science which enables computing machines to adopt new behaviors on the basis of observable and verifiable data and information It can be applied to ensure the security of the computers and the information by detecting anomalies using data mining and other such techniques This book will be an invaluable resource to understand the importance of machine learning and data mining in establishing computer and cyber security It emphasizes important security aspects associated with computer and cyber security along with the analysis of machine learning and data mining based solutions The book also highlights the future research domains in which these solutions can be applied Furthermore it caters to the needs of IT professionals researchers faculty members scientists graduate students research scholars and software developers who seek to carry out research and develop combating solutions in the area of cyber security using machine learning based approaches It is an extensive source of information for the readers belonging to the field of Computer Science and Engineering and Cyber Security professionals Key Features This book contains examples and illustrations to demonstrate the principles algorithms challenges and applications of machine learning and data mining for computer and cyber security It showcases important security aspects and current trends in the field It provides an insight of the future research directions in the field Contents of this book help to

prepare the students for exercising better defense in terms of understanding the motivation of the attackers and how to deal with and mitigate the situation using machine learning based approaches in better manner Machine Learning and Data Mining for Emerging Trend in Cyber Dynamics Haruna Chiroma,Shafi'i M. Abdulhamid,Philippe Fournier-Viger,Nuno M. Garcia,2021-04-01 This book addresses theories and empirical procedures for the application of machine learning and data mining to solve problems in cyber dynamics It explains the fundamentals of cyber dynamics and presents how these resilient algorithms strategies techniques can be used for the development of the cyberspace environment such as cloud computing services cyber security data analytics and disruptive technologies like blockchain The book presents new machine learning and data mining approaches in solving problems in cyber dynamics Basic concepts related work reviews illustrations empirical results and tables are integrated in each chapter to enable the reader to fully understand the concepts methodology and the results presented The book contains empirical solutions of problems in cyber dynamics ready for industrial applications The book will be an excellent starting point for postgraduate students and researchers because each chapter is design to have future research directions *MACHINE LEARNING FOR CYBER SECURITY DETECTING ANOMALIES AND INSTRUSIONS* Dr. Aadam Quraishi,Vikas Raina,Aditya Mahamkali,Arijeet Chandra Sen,2023-12-12 Because the Internet is so widespread in modern life and because of the expansion of technologies that are tied to it such as smart cities self driving cars health monitoring via wearables and mobile banking a growing number of people are becoming reliant on and addicted to the Internet In spite of the fact that these technologies provide a great deal of improvement to individuals and communities they are not without their fair share of concerns By way of illustration hackers have the ability to steal from or disrupt companies therefore inflicting damage to people all across the world if they exploit weaknesses As a consequence of cyberattacks businesses can face financial losses as well as damage to their reputation Consequently the security of the network has become a significant concern as a result Organizations place a significant amount of reliance on tried and true technologies such as firewalls encryption and antivirus software when it comes to securing their network infrastructure Unfortunately these solutions are not completely infallible they are merely a first line of security against malware and other sophisticated threats Therefore it is possible that certain persons who have not been sanctioned may still get access which might result in a breach of security For the purpose of preventing intrusion detection computer systems need to be safeguarded against both illegal users such as hackers and legitimate users such as insiders A breach of a computer system may result in a number of undesirable results including the loss of data restricted access to internet services the loss of sensitive data and the exploitation of private resources an initial version of the Intrusion Detection System IDS was constructed In light of the fact that it is a that is essential for the protection of computer networks it has therefore become a subject of study that is widely pursued Given the current condition of cybercrime it is impossible to deny the significance of the intrusion detection system IDS A possible example of how the IDS taxonomy is arranged may be found

here The intrusion detection system often known as an IDS is a piece of software or hardware that monitors a computer or network environment searches for indications of intrusion and then notifies the user of any potential threats Utilizing this warning report is something that the administrator or user may do in order to repair the vulnerability that exists inside the system or network In the aftermath of an intrusion it may be purposeful or unlawful to attempt to access the data
