Climate Change And Displacement Multidisciplinary Perspectives:

Climate Change and Displacement Jane McAdam, 2010-09-06 Environmental migration is not new Nevertheless the events and processes accompanying global climate change threaten to increase human movement both within states and across international borders The Inter governmental Panel on Climate Change has predicted an increased frequency and severity of climate events such as storms cyclones and hurricanes as well as longer term sea level rise and desertification which will impact upon people s ability to survive in certain parts of the world This book brings together a variety of disciplinary perspectives on the phenomenon of climate induced displacement With chapters by leading scholars in their field it collects in one place a rigorous holistic analysis of the phenomenon which can better inform academic understanding and policy development alike Governments have not been prepared to take a leading role in developing responses to the issue in large part due to the absence of strong theoretical frameworks from which sound policy can be constructed The specialist expertise of the authors in this book means that each chapter identifies key issues that need to be considered in shaping domestic regional and international responses including the complex causes of movement the conceptualisation of migration responses to climate change the terminology that should be used to describe those who move and attitudes to migration that may affect decisions to stay or leave The book will help to facilitate the creation of principled research based responses and establish climate induced displacement as an important aspect of both the climate change and global migration debates

Building the Critical Anthropology of Climate Change Hans A. Baer, Merrill Singer, 2024-08-14 This book applies a critical perspective to anthropogenic climate change and the global socio ecological crisis The book focuses on the critical anthropology of climate change by opening up a dialogue with the two main contending perspectives in the field namely the cultural ecological and the cultural interpretive perspectives Guided by these the authors take a firm stance on the types of changes that are needed to sustain life on Earth as we know it Within this framework they explore issues of climate and social equity the nature of the current era in Earth s geohistory the perspectives of the elite polluters driving climate change and the regrettable contributions of anthropologists and other scholars to climate change Engaging with perspectives from sociology political science and the geography of climate change the book explores various approaches to thinking about and responding to the existential threat of an ever warming climate In doing so it lays the foundation for a brave new sustainable world that is socially just highly democratic and climatically safe for humans and other species This book will be of interest to researchers and students studying environmental anthropology climate change human geography sociology and political science

Climate Change and People on the Move Fanny Thornton, 2018-10-24 This book applies a justice framework to analysis of the actual and potential role of international law with respect to people on the move in the context of anthropogenic climate change That people are affected by the impacts of climate change is no longer doubted including with implications for people movement migration displacement relocation etc Climate Change and People on the Move tackles

unique questions concerning international responsibility for people movement arising from the inequities inherent to climate change. Corrective and distributive justice provide the analytical backbone and are explored in a substantial theoretical chapter and then applied to subsequent contextual analysis. Corrective justice supports analysis as to whether people movement in the climate change context could be conceived or framed as harm, loss or damage which is compensable under international law either through fault centred regimes or no fault regimes i.e. insurance. Distributive justice supports analysis as to whether such movement could be conceived or framed as a disproportionate burden either for those faced with movement or those faced with sheltering people on the move from which duties of re-distribution may stem. This book contributes to the growing scholarship and analysis concerning international law or governance and people movement in response to the impacts of climate change by investigating the bounds of the law where the phenomenon is viewed as one of injustice.

Climate Change, Forced Migration, and International Law Jane McAdam, 2012-02-23. Displacement caused by climate change is an area of growing concern. With current rises in sea levels and changes to the global climate it is an issue of fundamental importance to the future of many parts of the world. This book critically examines whether States have obligations to protect people displaced by climate change under international refugee law, international human rights law and the international law on statelessness. Drawing on field work undertaken in Bangladesh, India and the Pacific island States of Kiribati and Tuvalu it evaluates whether the phenomenon of climate change induced displacement is an empirically sound category for academic inquiry. It does so by examining the reasons why people move or choose not to move, the extent to which climate change as opposed to underlying socio-economic factors provides a trigger for such movement and whether traditional international responses such as the conclusion of new treaties and the creation of new institutions are appropriate solutions in this context. In this way the book queries whether flight from habitat destruction should be viewed as another facet of traditional international protection or as a new challenge requiring more creative legal and policy responses. Law and the international law on statelessness. Drawing on

The Oxford Handbook of Refugee and Forced Migration Studies Elena Fiddian-Qasbiyeh, Gil Loescher, Katy Long, Nando Sigona, 2014-06-12. Refugee and Forced Migration Studies has grown from being a concern of a relatively small number of scholars and policy researchers in the 1980s to a global field of interest with thousands of students worldwide studying displacement either from traditional disciplinary perspectives or as a core component of newer programmes across the Humanities and Social and Political Sciences. Today the field encompasses both rigorous academic research which may or may not ultimately inform policy and practice as well as action research focused on advocating in favour of refugees' needs and rights. This authoritative Handbook critically evaluates the birth and development of Refugee and Forced Migration Studies and analyses the key contemporary and future challenges faced by academics and practitioners working with and for forcibly displaced populations around the world. The 52 state-of-the-art chapters written by leading academics, practitioners and policymakers working in universities, research centres, think tanks, NGOs and

international organizations provide a comprehensive and cutting edge overview of the key intellectual political social and institutional challenges arising from mass displacement in the world today The chapters vividly illustrate the vibrant and engaging debates that characterize this rapidly expanding field of research and practice *Climate Change and Urban Health* Emily Ying Yang Chan,2019-05-14 This book provides a theoretical framework and related technical skills for investigating climate change and its public health consequences and responses with a focus on urban settings and in particular Hong Kong a subtropical metropolis in Asia Specifically the book examines the impact of climate change on health in terms of mortality hospital admissions and help seeking as well as key response strategies of adaptation and mitigation Many existing books tend to consider the relationship of climate change and public health as two connected issues divided into various discrete topics Conversely this book explicitly applies public health concepts to study the human impact of climate change for example by conceptualising climate change impact and its alleviation mitigation and adaptation in a public health framework Overall this volume summarises what is known about climate change and health and ignites further debates in the area especially for urban subtropical communities from within a wider global perspective This book will be of great interest to students and scholars of environmental health public health climate change urban studies and Asian studies

The Oxford Handbook of International Environmental Law Lavanya Rajamani,Jacqueline Peel,2021-08-06 The second edition of this leading reference work provides a comprehensive discussion of the dynamic and important field of international law concerned with environmental protection It is edited by globally recognised international environmental law scholars Professor Lavanya Rajamani and Professor Jacqueline Peel and features 67 chapters authored by 76 renowned experts in their fields The Handbook discusses the key principles underpinning international environmental law its relevant actors and tools and rules applying in its substantive sub fields such as climate law oceans law wildlife and biodiversity law and hazardous substances regulation It also explores the intersection of international environmental law with other areas of international law such as those concerned with trade investment disaster migration armed conflict intellectual property energy and human rights The Handbook sets its discussion of international environmental law in the broader interdisciplinary context of developments in science ethics politics and economics which inform the way in which environmental rules are made implemented and enforced It provides an introduction to the foundations of international environmental law while also engaging with questions at the frontiers of research teaching and practice in the field including the role of Global South perspectives the contribution made by Earth jurisprudence and the growing role of a diverse range of actors from indigenous peoples to business and industry Like the first edition this second edition of the Handbook is an essential reference text for all engaged with environmental issues at the international level and the applicable governance and regulatory structures **Climate Change and Tradition in a Small Island State** Peter Rudiak-Gould,2013-07-18 The citizens of the Marshall Islands have been told that climate change will doom their country and they have seen confirmatory

omens in the land air and sea This book investigates how grassroots Marshallese society has interpreted and responded to this threat as intimated by local observation science communication and Biblical exegesis With grounds to dismiss or ignore the threat Marshall Islanders have instead embraced it with reasons to forswear guilt and responsibility they have instead adopted in group blame and having been instructed that resettlement is necessary they have vowed instead to retain the homeland These dominant local responses can be understood as arising from a pre existing vigorous constellation of Marshallese ideas termed modernity the trickster a historically inspired narrative of self inflicted cultural decline and seduction by Euro American modernity This study illuminates islander agency at the intersection of the local and the global and suggests a theory of risk perception based on ideological commitment to narratives of historical progress and decline

Human Rights Approaches to Climate Change Sumudu Atapattu, 2015-10-16 Despite the clear link between climate change and human rights with the potential for virtually all protected rights to be undermined as a result of climate change its catastrophic impact on human beings was not really understood as a human rights issue until recently This book examines the link between climate change and human rights in a comprehensive manner It looks at human rights approaches to climate change including the jurisprudential bases for human rights and the environment the theoretical framework governing human rights and the environment and the different approaches to this including benchmarks In addition to a discussion of human rights implications of international environmental law principles in the climate change regime the book explores how the human rights framework can be used in relation to mitigation adaption and adjudication Other chapters examine how vulnerable groups women indigenous peoples and climate refugees would be disproportionately affected by climate change The book then goes on to discuss a new category of people created by climate change those who will be rendered stateless as a result of states disappearing and displaced by climate change and whether human rights law can adequately address these emerging issues

Environmental Migration and Social Inequality Robert McLeman, Jeanette Schade, Thomas Faist, 2015-12-16 This book presents contributions from leading international scholars on how environmental migration is both a cause and an outcome of social and economic inequality It describes recent theoretical methodological empirical and legal developments in the dynamic field of environmental migration research and includes original research on environmental migration in Bangladesh Burkina Faso China Ghana Haiti Mexico and Turkey The authors consider the implications of sea level rise for small island states and discuss translocality gender relations social remittances and other concepts important for understanding how vulnerability to environmental change leads to mobility migration and the creation of immobile trapped populations Reflecting leading edge developments this book appeals to advanced undergraduate and graduate students researchers and policymakers
