Makino IT manager David explains in terms that my mother in law can understand why the software we use today can be so frustrating even dangerous at times and gives us some real ideas on what we can do about it Jim Brosseau Clarrus Consulting Group Inc A Book for Anyone Who Uses a Computer Today and Just Wants to Scream Today's software sucks There's no other good way to say it It's unsafe allowing criminal programs to creep through the Internet wires into our very bedrooms It's unreliable crashing when we need it most wiping out hours or days of work with no way to get it back And it's hard to use requiring large amounts of head banging to figure out the simplest operations It's no secret that software sucks You know that from personal experience whether you use computers for work or personal tasks In this book programming insider David Platt explains why that's the case and more importantly why it doesn't have to be that way And he explains it in plain jargon free English that's a joy to read using real world examples with which you're already familiar In the end he suggests what you as a typical user without a technical background can do about this sad state of our software how you as an informed consumer don't have to take the abuse that bad software dishes out As you might expect from the book's title Dave's expose is laced with humor sometimes outrageous but always dead on You'll laugh out loud as you recall incidents with your own software that made you cry You'll slap your thigh with the same hand that so often pounded your computer desk and wished it was a bad programmer's face But Dave hasn't written this book just for laughs He's written it to give long overdue voice to your own discovery that software does indeed suck but it shouldn't
