

Improved Side Crank Traction Engine

Left Side

When you are debating as to which engine to buy, remember that our traction engine builds a greater flow than that of all other makes. We guarantee in a positive manner to require any one handling our engine to guarantee them in any shape or form.

This side crank engine is of 14 inch stroke, and is developing its rated power—10 and 12 horse—also at low revolutions per minute from the crank shaft, as given. Beyond this there is almost nothing else that any other crank should consider this make.

We make 10 and 12 horse power side crank portable engines which are light and very durable.

Look at the engine. It is simple. The design is beautiful. It is strong in all parts. It is convenient in operation. Examine the driving and heavy engine frame with guides for cross-head and so, have to get down or out of alignment, with the result of friction,

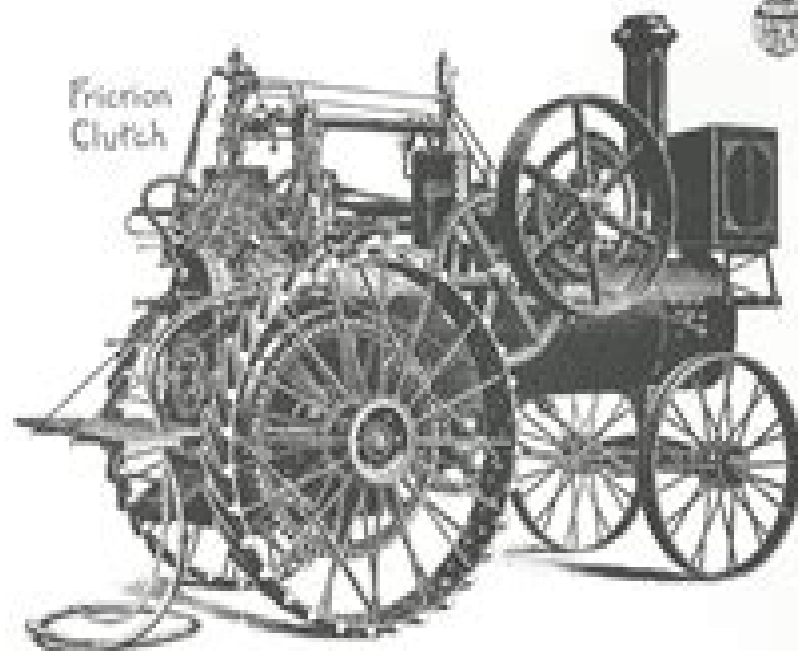

wear and breakage as to others. The main piston block being a part of the engine frame will remain right as long as the engine lasts. It was impossible to hold an engine properly in the boiler by means of a long boiler with bolting bolts throughout its length. By our new method we have the piston block and all engine frame securely to boiler and have the cylinder and fire to move when expansion takes place, retaining all stress and tendency to become loose.

The cylinder made for the entire length (one very) simply and directly upon the boiler, avoiding all exhaust pipes with their long and crooked openings, which cause great loss of power as a result of back pressure.

In this engine the steam, after doing its work, passes directly into the boiler, and meeting its return with a series of pipes provides a sure and reliable means of heating the feed water to a high temperature before

The Same Engine

Right Side

entering the boiler. By simply moving the cap to lower, where can be done while the engine has motion if needed, steam can be had at any time to these pipes.

The cross-head runs on the well-known V slides (one used by all the principal American engine builders) which are provided with double the wearing surface of an old pattern engine. These very essential parts of our engine are simply perfect, as they are built with the very best anti-friction metal and are arranged so that they can be quickly and accurately adjusted.

The connecting rods are all made from selected improved iron of best quality, accurately fitted with the best form of straps, and have with square ends; they must remain solid and immovable in the straps. These flying ball supporters with round and loose will give the advantage of having frames fixed apart, and,

Crank pin, main shaft and piston rod are from best quality steel, accurately turned and polished throughout, and are from cold rolled iron and other cheap material as to some others we might name.

The packing on this engine will have the close working of the machine and engine. It is all from exactly one pattern, larger and stronger, and runs direct from engine shaft to a straight line to the driving gear upon the wheel, avoiding all complications such as double gears, springs, levers, levers and parts liable to cause trouble. It is simple, plain and substantial in every part. It is perfect.

The engine from the footboard has very much of the above pump, valves, both steam, return and double-lever, pump valve, cylinder valve, reverse lever, and in fact all the necessary valves and levers required.
