The Design and Development Process David C. Wynn, P. John Clarkson, 2023-11-14 This book explores a process perspective on design and development grounded in research in design studies engineering design and systems design The design and development process is important it creates all artificial products and systems and determines how well they address human needs The process perspective set out in this book has value for design and development practice and education and is in its own right a fascinating topic of investigation This book expands on the foundations of a process perspective and discusses its realisation in many process models theories and approaches that have been developed over the years The chapters provide connected overviews of key concepts and introduce new conceptual frameworks to clarify relationships between the contributions discussed Practical considerations and competencies required to realise the tangible benefits of a process perspective are also discussed A unique aspect of this book is that it brings together many perspectives on the design and development process those that focus on individual design activity through to those that focus on large scale development projects those of research interest and those of practical interest and those of relevance to design contexts ranging from human centered design to engineering design and systems design The chapter bibliographies collect carefully selected recommendations for further reading on each topic discussed The book additionally contains many figures presented in colour visually reflecting each topic's relationship to the new organising frameworks that are introduced

Early stages of designing resource-efficient offerings Sergio Brambila-Macias, 2018-01-17 The increasing use of natural resources and the pollution it causes calls for new ways of addressing customer needs Additionally a more uncertain and complex world also presents new challenges In this thesis these new challenges are tackled through inter and transdisciplinary research which require more interaction across disciplines to tackle complex phenomena The manner in which companies address customer needs starts from the designing a multiple stakeholder perspective of offerings where companies rely on different types of support guidelines standards methods and tools In this thesis these offerings include products services systems and solutions This plays an important role in the use of natural resources and its impact on the environment In this Licentiate I present results to show initial cues on how to design resource efficient offerings and more specifically their analysis and evaluation in the early stages of the design process This type of offerings is suggested to be crucial for the circular economy which can be

understood as a paradigm shift towards sustainability In this paradigm shift designing is carried out by taking into account reuse remanufacture and recycling of products as strategies by multiple stakeholders and companies Other strategies include providing services a function or a solution through dematerialization and transmaterialization The methods used in this research are narrative and systematic literature reviews thematic analysis and a case study The results show a lack of interdisciplinary research in the academic literature in subjects relevant to the design of resource efficient offerings The results also show a need to clarify what transdisciplinary research entails Moreover current practice shows that support used by companies needs to consider several factors for it to be useful for example the vision of the company participation of potential users of the support and everyday operations among other characteristics Finally more practical support coming from academia is necessary to improve its use in industry
