

DEDUCTIVE REASONING

Deductive reasoning is a logical process that involves drawing specific conclusions based on general principles or premises.

OVERVIEW

Deductive reasoning is a top-down approach to logical thinking where specific conclusions are derived from general principles or premises. It follows a structured format in which if the premises are true and the reasoning is valid, the conclusion must also be true. This type of reasoning is commonly used in mathematics, formal logic, and philosophical thinking.

EXAMPLE

Premise 1: All mammals have lungs.
Premise 2: Dolphins are mammals.
Conclusion: Dolphins have lungs.

In this example, the first premise establishes a general principle that all mammals have lungs. The second premise identifies dolphins as a specific mammal. Using deductive reasoning, we can logically conclude that dolphins must also have lungs.

Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording

experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the

acquisition and use of abstract mathematical concepts **Math Instruction for Students with Learning Difficulties**
