Datamsa Multiple System Atrophy Patient:

Datamsa Multiple System Atrophy Patient Data Report Bill Sydnor, 2015-12-02 Multiple System Atrophy MSA is a rare degenerative progressive neurological disease so named because its signs and symptoms affect multiple systems of the body. There is no effective treatment and no cure. Because of its rarity, the experiences of MSA patients are seldom heard. With the input of fellow patients and individuals affected by MSA, caregivers loved ones of those lost, I developed a survey to assess our collective experiences. Several drafts of the survey were developed, reviewed, adjusted, and edited over a period of months. In March 2014, I launched dataMSA in recognition of MSA Awareness Month, March. The dataMSA survey was open to all who may have been affected by the disease, patients, caregivers, and loved ones speaking for those lost to MSA. At the time of this printing, nearly 350 people from across the globe have added their experiences to the dataMSA collection. The purpose of this collection is to raise the voices of MSA patients to advance research and education to enhance treatment and to find a cure for this debilitating disease. 100% of the profits from the sale of this book will be donated to the MSA Coalition. **Datamsa**

Surveys for Multiple System Atrophy Bill Sydnor, 2015-12-07 When I couldn't find patient-driven information about MSA and when my doctors didn't have a lot of information about patient experiences, I set out to create a way patients could share their experiences. dataMSA has collected information from nearly 350 persons worldwide who have been affected by MSA, patients, caregivers, loved ones, to those lost. The data has been shared with researchers at UCSF, Vanderbilt, Mayo Clinic, UF, and other centers. This text is an invaluable resource for health care providers, support staff members, and others who seek information about multiple system atrophy. No revenue is collected from the surveys, and patients remain confidential. 100% of the profits from this book will be donated to the MSA Coalition to support research for a cure. Thank you for helping us raise our MSA voices. Bill Sydnor, dataMSA creator. Multiple System Atrophy Gregor K. Wenning, Alessandra

Fanciulli, 2013-09-14 This textbook provides a comprehensive monograph on multiple system atrophy (MSA), a rare and fatal neurodegenerative disorder that presents with autonomic failure and either parkinsonism (MSA-P) or cerebellar ataxia (MSA-C). The underlying neuropathology of MSA is characterized by striatonigral degeneration (SND), olivopontocerebellar atrophy (OPCA), and unique oligodendroglial cytoplasmic alpha-synuclein inclusions. MSA is therefore classified among the alpha-synucleinopathies, such as Parkinson's disease, pure autonomic failure, and dementia with Lewy bodies. Over the last decade, there have been important advances in early diagnosis, pathogenesis research, and clinical trial activity. The monograph will cover the entire spectrum, ranging from molecular and genetic work to symptomatic and interventional therapies. The book is written for movement disorder clinicians and basic neuroscientists interested in degenerative movement disorders.

Autonomic Nervous System Gregor K. Wenning, Florian Krismer, 2013-11-11 Multiple system atrophy (MSA) is a sporadic and fatal synuclein-linked oligodendroglialopathy manifesting with progressive autonomic failure, poorly levodopa-responsive parkinsonism, and cerebellar ataxia in any combination. Here, we review key aspects of MSA, integrating important insights

from rapidly emerging fields such as genetics diagnostic work up including imaging and translational therapies aimed at disease modification
