Comprehensive Database Axially Loaded Driven:

A Comprehensive Database of Tests on Axially Loaded Piles Driven in Sand Zhongxuan Yang, Richard Jardine, Wangbo Guo, Fiona Chow, 2015-11-11 A Comprehensive Database of Tests on Axially Loaded Driven Piles in Sands reviews the critical need to develop better load test databases for piles driven in sands The key quality parameters population of current entries and reporting formats are described before offering preliminary results obtained from comparisons between axial capacities calculated by various predictive approaches and site measurements This book also shows that the simplified and offshore ICP and UWA variants proposed by some practitioners are over conservative and that their use could be discontinued The new pile capacity and stiffness database offers a broad scope for evaluating potential prediction biases relating to a wide range of soil and pile parameters Submission of further high quality tests for inclusion in regularly updated versions is encouraged Presents a comprehensive and updated database for piles driven in predominantly silica sands Features reviews of the design procedures for driven piles in sand Assesses the performance of various mainstreams design procedures applied for piles driven in sand Provides comprehensive information of case histories of pile load tests *Proceedings of China-Europe Conference on Geotechnical Engineering* Wei Wu, Hai-Sui Yu, 2018-08-02 This book compiles the second part of contributions to the China Europe Conference on Geotechnical Engineering held 13 16 August 2018 in Vienna Austria About 400 papers from 35 countries cover virtually all areas of geotechnical engineering and make this conference a truly international event The contributions are grouped into thirteen special sessions and provide an overview of the geoengineering research and practice in China Europe and the world Constitutive model Micro macro relationship Numerical simulation Laboratory testing Geotechnical monitoring instrumentation and field test Foundation engineering Underground construction Environmental geotechnics New geomaterials and ground improvement Cold regions geotechnical engineering Geohazards risk assessment mitigation and prevention Unsaturated soils and energy geotechnics Geotechnics in transportation structural and hydraulic Engineering **Model Uncertainties in Foundation Design** Chong Tang, Kok-Kwang Phoon, 2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian

Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997-1-202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal

Uncertainty, Modeling, and Decision Making in Geotechnics Kok-Kwang Phoon, Takayuki Shuku, Jianye Ching, 2023-12-11 Uncertainty Modeling and Decision Making in Geotechnics shows how uncertainty quantification and numerical modeling can complement each other to enhance decision making in geotechnical practice filling a critical gap in guiding practitioners to address uncertainties directly The book helps practitioners acquire a working knowledge of geotechnical risk and reliability methods and guides them to use these methods wisely in conjunction with data and numerical modeling In particular it provides guidance on the selection of realistic statistics and a cost effective accessible method to address different design objectives and for different problem settings and illustrates the value of this to decision making using realistic examples Bringing together statistical characterization reliability analysis reliability based design probabilistic inverse analysis and physical insights drawn from case studies this reference guide from an international team of experts offers an excellent resource for state of the practice uncertainty informed geotechnical design for specialist practitioners and the research community
