

Page Title	Content You Should Know
Module Outcome & Objectives	Outcome The learner will be able to identify cleaning requirements within the perioperative environment and implement these into practice. Objectives 1. Describe the association between surgical site infections and environmental cleaning. 2. Explain the correct environmental cleaning process during turnover (between-patient cleaning). 3. Differentiate between turnover and terminal cleaning.
Why Clean? Break the Chain of Infection Responsibility	Why clean the perioperative environment? • Cleaning and disinfecting the OR and procedures rooms is key to preventing the spread of potentially pathogenic microorganisms that may cause surgical site infections. • The chain of infection begins with an infectious organism that resides in a reservoir (eg. human, animal, environmental) and includes a susceptible host and a mode of transmission. • Cleaning and disinfecting the surgical environment disrupts the chain of infection to help prevent infections. • Hand hygiene is the single most effective action to prevent infection. • Implement standardized cleaning procedures to effectively clean the perioperative environment.
Product Selection and Use	What is used to clean the perioperative environment? • Cleaning agents for the perioperative environment are selected based on the Environmental Protection Agency registration and hospital grading, contact time of the cleaning agent, and targeted organisms. • Do not use spray bottles to apply cleaning agents in the perioperative environment. • Clearly label an environmental cleaning agent that is removed from its original container and placed into a secondary container.
Cleaning Procedures	How do you clean in the perioperative environment? • Clean from top to bottom. • Clean from the less-soiled areas to the dirtiest areas. • Move the OR bed and mop under that area.
