Climate Rescue Capitalism Using Product Profit To Fight Climate Change:

Climate Rescue Capitalism George Ortega, 2014-09-03 Just as the world's controlling population won that control by selling goods and services humanity must use this same means to win back the level of political influence necessary to first winning its battle against them and then winning the battle against climate change Humanity must go into business for the sake and interests of humanity and market products that compete with and win against products marketed by today's controlling population Climate Rescue Capitalism is a powerful vehicle by which business profit within a capitalist economy can be redirected in order to fight climate change It is a way to direct product profits away from conventional corporations and toward the funding of the scientific sociological and political initiatives needed to best mitigate and adapt to climate change As such it represents a pragmatic coming together of capitalist and socialist perspectives that maximizes the fundamental strengths of these two disparate economic systems as they relate to climate change As a strategy Climate Rescue Capitalism is deceptively simple but of unparalleled promise The idea is to create new companies we will call Climate Rescue Corporations that do business in order to finance the fight against climate change These corporations would be owned and operated by private individuals as well as not for profit climate change organizations They would manufacture products to compete with existing products offered by conventional companies Consumers would choose Climate Rescue Corporation products over those of their competitors because they would prefer to see the profit from their purchases be used to fight climate change than to further enrich private corporations This market based means of increasing humanity's ability to fight climate change is called Climate Rescue Capitalism for two reasons First because it is a capitalist venture designed expressly to fund the fight against climate change And second because it is a free market capitalist venture in every sense of the word It requires no government participation and infringes upon no one's personal political or economic freedom It is nothing more or less than the utilization of capitalist marketing principles and practices for the purpose of fighting climate change rather than to further enrich the individuals and corporations whose stranglehold on our world's political will to fight climate change is neither ecologically sustainable nor morally acceptable How effective would the selling point of donating 100 percent of product profit to fighting climate change be in encouraging shoppers to buy these kinds of products In early September 2014 I conducted a survey in White Plains New York to determine if consumers would buy Climate Rescue Corporation supermarket products equal in price and quality to products they now buy to help fight climate change and 44 of the 50 respondents surveyed answered yes The exact question I had respondents read so as to not verbally influence their answer was If your supermarket offered new food products that were equal in price and quality to the products that you now buy and you knew that one hundred percent of the profit from these new products would be donated to the cause of fighting climate change would you buy these new products Climate Rescue Corporations would provide us with the opportunity to do something very good for ourselves and for our world's future generations every time we buy one of

their products And we would feel very good about doing this good We would also feel good about learning more and more about climate change by reading with interest and motivation the routinely updated information provided on the package labels of the products we buy These small joys are of course insignificant when compared to the good we would be doing to hasten our world's meaningful response to the climate crisis This is Climate Rescue Capitalism's real gift **Feeling**

Astrid B. Stensrud, Thomas Hylland Eriksen, 2019-07-20 Until now the growing body of work on environmental anthropology has largely ignored the unavoidable impact of global capitalism on the environment and the extent to which capital itself is a key driver of climate change Climate Capitalism and Communities focuses explicitly on that nexus examining the injustices and inequalities as well as the activist responses that have arisen as a result and the contradictions between the imperatives of exponential economic growth and those of environmental sustainability and society as a whole Bringing an innovative ethnographic toolkit to bear on a crisis that is at once global and highly localised the authors shift attention away from the consequences of climate change to a focus on the social relations and power structures that continue to prevent effective action

The Limits of the Green Economy Anneleen Kenis, Matthias Lievens, 2015-03-24 Projecting win win situations new economic opportunities green growth and innovative partnerships the green economy discourse has quickly gained centre stage in international environmental governance and policymaking Its underlying message is attractive and optimistic if the market can become the tool for tackling climate change and other major ecological crises the fight against these crises can also be the royal road to solving the problems of the market But how green is the green economy And how social or democratic can it be This book examines how the emergence of this new discourse has fundamentally modified the terms of the environmental debate Interpreting the rise of green economy discourse as an attempt to re invent capitalism it unravels the different dimensions of the green economy and its limits from pricing carbon to emissions trading from sustainable consumption to technological innovation The book uses the innovative concept of post politics to provide a critical perspective on the way green economy discourse represents nature and society and their interaction and forecloses the

imagination of alternative socio ecological possibilities As a way of repoliticising the debate the book advocates the construction of new political faultlines based on the demands for climate justice and democratic commons This book will be of interest to students and scholars of environmental politics political ecology human geography human ecology political theory philosophy and political economy Includes a foreword written by Erik Swynnedouw Professor of Geography Manchester University
