Compact Heat Exchangers William Morrow Kays,Alexander Louis London,1955 **Compact Heat Exchangers** J.E. Hesselgreaves,Richard Law,David Reay,2016-09-26 Compact Heat Exchangers Selection Design and Operation Second Edition is fully revised to present the most recent and fundamental ideas and industrial concepts in compact heat exchanger technology This complete reference compiles all aspects of theory design rules operational issues and the most recent developments and technological advancements in compact heat exchangers New to this edition is the inclusion of micro sintered and porous passage description and data electronic cooling and an introduction to convective heat transfer fundamentals New revised content provides up to date coverage of industrially available exchangers recent fouling theories and reactor types with summaries of off design performance and system effects and installations issues in for example automobiles and aircraft Hesselgreaves covers previously neglected approaches such as the Second Law of Thermodynamics pioneered by Bejan and co workers The justification for this is that there is increasing interest in life cycle and sustainable approaches to industrial activity as a whole often involving exergy Second Law analysis Heat exchangers being fundamental components of energy and process systems are both savers and spenders of energy according to interpretation Contains revised content covering industrially available exchangers recent fouling theories and reactor types Includes useful comparisons throughout with conventional heat exchangers to emphasize the benefits of CPHE applications Provides a thorough system view from commissioning operation maintenance and design approaches to reduce fouling and fouling factors Compiles all aspects of theory design rules operational issues and the most recent developments and technological advancements in compact heat exchangers **Compact Heat Exchangers** J.E. Hesselgreaves,2001-05-08 This book presents the ideas and industrial concepts in compact heat exchanger technology that have been developed in the last 10 years or so Historically the development and application of compact heat exchangers and their surfaces has taken place in a piecemeal fashion in a number of rather unrelated areas principally those of the automotive and prime mover aerospace cryogenic and refrigeration sectors Much detailed technology familiar in one sector progressed only slowly over the boundary into another sector This compartmentalisation was a feature both of the user industries themselves and also of the supplier or manufacturing industries These barriers are now breaking down with valuable cross fertilisation taking place One of the industrial sectors that is waking up to the challenges of compact heat exchangers is that broadly defined as the process sector If there is a bias in the book it is towards this sector Here in many cases the technical challenges are severe since high

pressures and temperatures are often involved and working fluids can be corrosive reactive or toxic The opportunities however are correspondingly high since compacts can offer a combination of lower capital or installed cost lower temperature differences and hence running costs and lower inventory In some cases they give the opportunity for a radical rethink of the process design by the introduction of process intensification PI concepts such as combining process elements in one unit An example of this is reaction and heat exchange which offers among other advantages significantly lower by product production To stimulate future research the author includes coverage of hitherto neglected approaches such as that of the Second Law of Thermodynamics pioneered by Bejan and co workers The justification for this is that there is increasing interest in life cycle and sustainable approaches to industrial activity as a whole often involving exergy Second Law analysis Heat exchangers being fundamental components of energy and process systems are both savers and spenders of exergy according to interpretation Compact Heat Exchangers William Morrow Kays, Alexander Louis London, 1964-01-01
