Computational Developmental Psychology Bradford S

Thomas R. Shultz

Computational Developmental Psychology Bradford S:

Computational Developmental Psychology Thomas R. Shultz, 2003 An overview of the emerging discipline of computational developmental psychology emphasizing the use of constructivist neural networks Despite decades of scientific research the core issues of child development remain too complex to be explained by traditional verbal theories These issues include structure and transition representation and processing innate and experiential determinants of development stages of development the purpose and end of development and the relation between knowledge and learning In this book Thomas Shultz shows how computational modeling can be used to capture these complex phenomena and in so doing he lays the foundation for a new subfield of developmental psychology computational developmental psychology A principal approach in developmental thinking is the constructivist one Constructivism is the Piagetian view that the child builds new cognitive structures by using current mental structures to understand new events In this book Shultz features constructivist models employing networks that grow as well as learn This allows models to implement synaptogenesis and neurogenesis in a way that allows qualitative changes in processing mechanisms The book's appendices provide additional background on the mathematical concepts used and a companion Web site contains easy to use computational packages

Developmental Psychology Mark Bennett, 1999 First Published in 2000 Routledge is an imprint of Taylor Francis an informa company

Neoconstructivism Scott Johnson, 2009-11-25 The neoconstructivist approach is rooted in Piaget's constructivist emphasis on developmental mechanisms yet also reflects modern advances in our understanding of learning mechanisms cortical development and modeling This book brings together for the first time theoretical views that embrace computational models and developmental neurobiology and emphasize the interplay of time experience and cortical architecture to explain emergent knowledge with an empirical line of research identifying a set of general purpose sensory perceptual and learning mechanisms that guide knowledge acquisition across different domains and through development

Infant Development J. Gavin Bremner, Alan Slater, George Butterworth, 1997 An account of recent research into infant development the text includes 13 chapters written by British and North American infancy researchers Although the chapters are organized along conventional

lines into sections on perceptual cognitive and social development the emphasis appearing both within chapters and in the linking editorial passages within sections is on links between perceptual cognitive and social aspects of development Thus new findings on infant perception are related to both old and new accounts of cognitive development and links are drawn between these topics and the development of social interaction and language Attention is given to both traditional approaches such as Piagetian theory and more recent approaches such as direct perception and dynamic systems theory There is also a chapter devoted to interpreting infant development from a psychoanalytic perspective
