Computational Neuroscience Wanpracha Chaovalitwongse, Panos M. Pardalos, Petros Xanthopoulos, 2010-07-03 This book represents a collection of recent advances in computational studies in neuroscience research that practically applies to a collaborative and integrative environment in engineering and medical domains. This work has been designed to address the explosion of interest by academic researchers and practitioners in highly effective coordination between computational models and tools and quantitative investigation of neuroscientific data. To bridge the vital gap between science and medicine, this book brings together diverse research areas ranging from medical signal processing, image analysis and data mining to neural network modeling, regulation of gene expression and brain dynamics. We hope that this work will also be of value to investigators and practitioners in academic institutions who become involved in computational modeling as an aid in translating information in neuroscientific data to their colleagues in medical main. This volume will be very appealing to graduate and advanced undergraduate students, researchers and practitioners across a wide range of industries, e.g. pharmaceutical, chemical, biological sciences who require a detailed overview of the practical aspects of computational modeling in real life neuroscience problems. For this reason, our audience is assumed to be very diverse and heterogeneous, including vii, viii Preface researchers from engineering, computer science, statistics and mathematics, as well as medical and biological scientists, physicians working in scientific research to understand how basic science can be linked with biological systems.

Jasper's Basic Mechanisms of the Epilepsies Jeffrey Noebels, 2012-06-29 Jasper's Basic Mechanisms Fourth Edition is the newest, most ambitious and now clinically relevant publishing project to build on the four decade legacy of the Jasper's series. In keeping with the original goal of searching for a better understanding of the epilepsies and rational methods of prevention and treatment, the book represents an encyclopedic compendium of neurobiological mechanisms of seizures, epileptogenesis, epilepsy, genetics and comorbid conditions. Of practical importance to the clinician and new to this edition are disease mechanisms of genetic epilepsies and therapeutic approaches ranging from novel antiepileptic drug targets to cell and gene therapies.

Biophysically based Computational Models of Astrocyte ~ Neuron Coupling and their Functional Significance John Wade, Scott Kelso, Vincenzo Crunelli, Liam J. McDaid, Jim Harkin, 2014-03-21 Neuroscientists are increasingly becoming more interested in modelling brain functions where capturing the biophysical mechanisms underpinning these functions requires plausible models at the level of neuron cells. However, cell level models are still very much in the embryo stage and therefore there is a need to advance the level of biological realism at the level of neurons and synapses. Recent publications have highlighted that astrocytes continually exchange information with multiple synapses if we are to fully appreciate this dynamic and coordinated interplay between these cells, then more research on bidirectional signalling between astrocytes and neurons is required. A better understanding of astrocyte-neuron cell coupling would provide the building block for studying the regulatory capability of astrocyte networks on a large scale. For example, it is

believed that local and global signalling via astrocytes underpins brain functions like synchrony learning memory and self repair This Research Topic aims to report on current research work which focuses on understanding and modelling the interaction between astrocytes and neurons at the cellular level Bottom up and at network level Top down Understanding astrocytic regulation of neural activity is crucial if we are to capture how information is represented and processed across large neuronal ensembles in humans
