Introduction to Complex Analysis Michael E. Taylor,2020-09-23 In this text the reader will learn that all the basic functions that arise in calculus such as powers and fractional powers exponentials and logs trigonometric functions and their inverses as well as many new functions that the reader will meet are naturally defined for complex arguments Furthermore this expanded setting leads to a much richer understanding of such functions than one could glean by merely considering them in the real domain For example understanding the exponential function in the complex domain via its differential equation provides a clean path to Euler s formula and hence to a self contained treatment of the trigonometric functions Complex analysis developed in partnership with Fourier analysis differential equations and geometrical techniques

leads to the development of a cornucopia of functions of use in number theory wave motion conformal mapping and other mathematical phenomena which the reader can learn about from material presented here This book could serve for either a one semester course or a two semester course in complex analysis for beginning graduate students or for well prepared undergraduates whose background includes multivariable calculus linear algebra and advanced calculus Measure, Integration & Real Analysis Sheldon Axler, 2019-11-29 This open access textbook welcomes students into the fundamental theory of measure integration and real analysis Focusing on an accessible approach Axler lays the foundations for further study by promoting a deep understanding of key results Content is carefully curated to suit a single course or two semester sequence of courses creating a versatile entry point for graduate studies in all areas of pure and applied mathematics Motivated by a brief review of Riemann integration and its deficiencies the text begins by immersing students in the concepts of measure and integration Lebesgue measure and abstract measures are developed together with each providing key insight into the main ideas of the other approach Lebesgue integration links into results such as the Lebesgue Differentiation Theorem The development of products of abstract measures leads to Lebesgue measure on $\mathbb{R}^n$ Chapters on Banach spaces L_p spaces and Hilbert spaces showcase major results such as the Hahn Banach Theorem Hölder's Inequality and the Riesz Representation Theorem An in depth study of linear maps on Hilbert spaces culminates in the Spectral Theorem and Singular Value Decomposition for compact operators with an optional interlude in real and complex measures Building on the Hilbert space material a chapter on Fourier analysis provides an invaluable introduction to Fourier series and the Fourier transform The final chapter offers a taste of probability Extensively class tested at multiple universities and written by an award winning mathematical expositor Measure Integration students and instructors looking to reinforce these ideas will appreciate the electronic Supplement for Measure Integration Real Analysis that is freely available online For errata and updates visit <https://measure.axler.net>
