Carotenoids Carotenoids:

Carotenoids John T. Landrum, 2009-12-21 Carotenoids are of great interest due to their essential biological functions in both plants and animals. However, the properties and functions of carotenoids in natural systems are surprisingly complex. With an emphasis on the chemical aspects of these compounds, Carotenoids: Physical Chemical and Biological Functions and Properties presents a b Carotenoids N.I. Krinsky, M.M. Mathews, Ross, R.F. Taylor, 2012-12-06 In the mid 1960s, scientists working on carotenoids throughout the World agreed to have periodic meetings for the purpose of discussing and disseminating scientific research results concerning all aspects of carotenoids. The meetings were also organized to act as teaching forums for students and the major scientific results from each meeting were to result in a publication. Each meeting was planned to be International in scope, being held in different locations in the World and organized by local recognized carotenoid scientists. The first of the Carotenoid meetings was held in Trondheim, Norway in 1966. Meetings then followed in Las Cruces, New Mexico 1969; Cluj, Roumania 1972; Berne, Switzerland 1975; Madison, Wisconsin 1978; Liverpool, England 1981; and Munich, Federal Republic of Germany 1984. In all of these meetings, the original purposes which stimulated the first meeting were accomplished: scientific discussion, student education, and resulting scientific publication. The meetings and the information resulting from them have led to significant advances in carotenoid biochemistry, biology, and chemistry. This publication represents the contributions from a distinguished list of participants. We look forward to the future meetings in this series. Carotenoids: Structure and Function in the Human Body Muhammad Zia-Ul-Haq, Saikat Dewanjee, Muhammad Riaz, 2021-02-17 Plants produce chemicals as part of their normal metabolic activities. These include primary metabolites found in all plants such as sugars and fats, as well as secondary metabolites which can have therapeutic effects in humans and be refined to produce drugs. Plants synthesize a bewildering variety of phytochemicals, but most are derivatives of a few biochemical motifs. Numerous herbal-derived substances have been evaluated for their therapeutic potential. These include alkaloids, coumarins, saponins, plant pigments, and flavonoids. Flavonoids, carotenoids, and anthocyanins are probably the best known of these substances due to their antioxidant properties. Carotenoids: Structure and Function in the Human Body presents comprehensive coverage of carotenoids. The text covers the scientific literature and clinical significance of this organic pigment with an emphasis on its therapeutic potential. The authors approach carotenoids from a range of perspectives, from their structural and physicochemical properties to their distribution in nature, interaction with the human metabolism, and use as a coloring agent in various products. The intake, metabolism, and secretion of anthocyanins in the human body are covered in depth, as are the biosynthetic pathways through which these compounds are synthesized in the natural system. Factors affecting stability and extraction are listed, and health-related uses and biological activities are covered in great detail. Present and future trends in carotenoid research are also presented. This book provides a solid background in carotenoids for researchers and professionals in food science, food technology, nutrition, biology, chemistry, and

medical sciences Carotenoids Volker Böhm,2019-12-05 Carotenoids are a group of natural pigments consisting of more than 750 compounds They are mostly yellow orange or red in color due to the system of conjugated double bonds This structural element is also responsible for the good antioxidant properties of many carotenoids Carotenoids have shown numerous biological activities not only as provitamin A e g preventive properties of fruits and vegetables As lipophilic compounds their uptake and storage in the body are dependent on various conditions In vitro and in vivo data showed stimulating and inhibitory effects of matrix compounds on bioaccessibility and bioavailability of carotenoids This Special Issue presents the most recent advances in carotenoids research in addition to the search for antioxidant properties Chapters present the photoprotective properties of carotenoids as well as the activities of carotenoids related to liver health Research data on the effect of degree of ripeness on carotenoids pattern in rosehip and possibilities to use shrimp waste as source of carotenoids are presented Other investigations characterized apocarotenoids in microalgae and the properties of inclusion complexes of lycopene and beta cyclodextrin Biological activities of synthesized retinoyl flavonolignan hybrids were also reported In addition the effects of in vitro digestion of human milk on the micellization of carotenoids were investigated

Carotenoids: Properties, Processing and Applications Charis M. Galanakis,2019-08-27 Carotenoids Properties Processing and Applications fills the gap of transfer knowledge between academia and industry covering integral information in three critical dimensions properties recovery and applications At the moment carotenoid research is directed at particular applications including colorants antioxidants and recovery from plant processing by products These trends take into account the health nutrition and functions of carotenoids the new recovery efforts from underutilized sources the extraction procedures using green solvents and technologies and their sustainability aspects Written by a team of experts in the field of food chemistry food science and technology as well as bioresource technologists mainly from academia the book covers the most recent advances in the field of carotenoids while also analyzing the potential of already commercialized processes and products Covers carotenoids properties in view of alternative sources plant by products microalgae etc recovery technologies and applications Thoroughly explores mechanistic aspects dietary intake and recommendations surrounding the health promoting effects of carotenoids Discusses the effect of processing and storage conditions in carotenoid levels and bioavailability Presents applications and case studies in the food industry **Carotenoids**

Dragan Cvetkovic,Goran Nikolic,2017-06-14 Carotenoids are one of the most widespread pigment groups distributed in nature more than 700 natural carotenoids have been described so far These pigments are known for versatile roles they play in living organisms however their most pivotal function is involvement in scavenging of reactive oxygen species and photoprotection In the same time carotenoids as natural pigments with important biological activities such as antioxidant and provitamin A activity have a great potential in the food feed and pharmaceutical industries They can be either extracted from plants and algae or synthesized by various microorganisms including bacteria yeasts filamentous fungi and microalgae **Carotenoids**

Agnieszka Kaczor, Malgorzata Baranska, 2016-01-12 Carotenoids are an essential component of the human diet Bioactive by nature they are rich in antioxidants promote vitamin A activity and lower the development of chronic illnesses As such they are an area of growing interest to researchers and scientists who are working to design develop and launch new functional food products dietary supplements and other nutritional solutions Carotenoids Nutrition Analysis and Technology is an up to date overview of the key areas of carotenoids in nutrition therapy and technology In the first section the authors present a functional food perspective outlining the therapeutic applications of the bioactive pigments The second part is dedicated to the spectroscopic analysis of carotenoids providing in depth scientific methods and real research findings In the final section various technological applications of carotenoids are considered including biotechnology and future prospects Written by international experts in the field this comprehensive book will be of interest to food scientists and researchers nutritionists and health food companies It will be of particular use to anyone involved in the spectroscopic analysis of carotenoids and other related bioactives

Carotenoids: Biological Functions of Carotenoids and Apocarotenoids in Natural and Artificial Systems , 2022-08-23 Carotenoids Biological Functions of Carotenoids and Apocarotenoids in Natural and Artificial Systems Volume 674 in the Methods in Enzymology series highlights new advances in the field with this new volume presenting interesting chapters on topics such as Ultrafast laser spectroscopic studies on carotenoids in solution and on those bound to photosynthetic pigment protein complexes Assessing photoprotective functions of carotenoids in photosynthetic systems of plants and green algae Fluorescence of carotenoids probing binding site interactions and conformational motion in carotenoproteins Resonance Raman A powerful tool to interrogate carotenoids in biological matrices and much more Other chapters in the book cover Engineering the carotenoid biosynthetic pathway to study the function of carotenoids in light harvesting complexes Carotenoids as proxies for variations in photosynthesis and phenology in response to environmental and climatic change Apocarotenoid pigment biosynthesis in non model plants Apocarotenoid transport in plants Screening for apocarotenoid plant growth regulators in Arabidopsis Effects of herbivory on carotenoid biosynthesis and breakdown Biosynthesis and action of apocarotenoid plant hormones and much more Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in Methods in Enzymology series Updated release includes the latest information on Carotenoids Biological functions of carotenoids and apocarotenoids in natural and artificial systems

Carotenoids and Human Health Jaume Amengual, 2019-12-03 Carotenoids are a group of approximately 600 compounds synthesized by photosynthetic organisms These pigments are abundant in fruits and vegetables as well as in certain animal products such as eggs and salmon being responsible for their colorful appearance The bioactive properties of certain carotenoids in human health are clear as some of these compounds have antioxidant properties and serve as the only precursors of vitamin A in nature The aim of this Special Issue entitled Carotenoids and Human Health is to provide the scientific community with an updated perspective of this exciting and growing research area

We compiled 19 papers from some of the most prominent scientists in the carotenoid field including seven literature reviews and 12 original publication covering topics such as cancer obesity vision cognitive function and skin health *Carotenoids Volume 5: Nutrition and Health* George Britton, Synnove Liaaen-Jensen, Hanspeter Pfander, 2009-12-29 The Carotenoids book series provides an introduction to the fundamental chemistry detailed accounts of the basic methods used in carotenoid research and critical discussions of the biochemistry functions and applications of carotenoids The use of carotenoids against diseases is discussed This volume is to be used in conjunction with the Carotenoids book series and the Carotenoids Handbook
