## **Design Of Human Nutrigenomics Studies:**

**Design of human nutrigenomics studies** Siân Astley,Linda Penn,2023-09-04 The key to exploiting links between diet and health is to have a better understanding of how our bodies respond to what we eat In the past many food constituents were regarded as unimportant because they lacked a specific nutritional role More recently nutritional research has been limited to a few dietary compounds a handful of relevant biochemical pathways and a small number of genes pertinent to specific diseases These studies have given rise to specific examples of benefits provided by individual groups of food compounds including non nutrients and demonstrated that whilst poor diet can accelerate age related degeneration a diet rich in fruits and vegetables cereals and plant oils significantly reduces our risk of chronic disease However the benefits of dietary and lifestyle choices are not the same for everyone Nutrigenomics offers a more holistic approach to nutritional research It considers not only our genes and the effect they have on our response to diet but also how diet affects our genes and proteins to alter our metabolism and our risk of disease as we age However the logistics associated with human study design and interpretation of the data generated using these technologies is complex The European Network of Excellence NuGO was established in 2004 with the specific aim of developing and integrating omic technologies for European nutritional research This has meant focusing on technical problems specific to nutrition as well as training existing and new researchers to use the technology alongside existing and new approaches The workshop Design of human nutrigenomic studies reviewed examples of successful human nutrition studies using post genomics technologies transcriptomics metabolomics and proteomics and the issues discussed are described in detail in this publication [Proteomics in Foods](#) Fidel Toldrá,Leo M. L. Nollet,2012-12-16 Food proteomics is one of the most dynamic and fast developing areas in food science The goal of this book is to be a reference guide on the principles and the current and future potential applications of proteomics in food science and technology More specifically the book will discuss recent developments and the expected trends of the near future in food proteomics The book will be divided into two parts The first part 7 chapters will focus on the basic principles for proteomics e g sample preparation such as extraction and separation techniques analytical instrumentation currently in use and available databases for peptide and protein identification The second part of the book 26 chapters will focus on applications in foods It will deal with quality issues related to post mortem processes in animal foods and quality traits for all foods in general as well as the identification of bioactive peptides and proteins which are very important from the nutritional point of view Furthermore consumers are now extremely susceptible to food safety issues and proteomics can provide reassurance with different safety aspects such as food authenticity detection of animal species in the food and identification of food allergens All of these issues will be covered in this book It is also worth noting that both editors are internationally recognized experts in the field of food science and both have edited numerous food science books and handbooks [Recent Advances in Nutrigenetics and Nutrigenomics](#) C Bouchard,J.
