Houghton,2012-12-06 Error coding is a fascinating subject as much if not more so as it is an indispensable part of modern engineering systems Unfortunately in a bid to remain general and to create a solid foundation upon which to build many books on this subject are out of the reach of those with more engineering based or non mathematical backgrounds This is a pity because in many cases the maths is tractable with few and simple rules If we are content to believe that it works and let others worry about the deeper mysteries of how or why then with a little practice the design and implementation of practical error coding systems becomes straightforward In this text I have attempted to reveal the useful kernel of the subject removing the shell of terms and proofs that usually surrounds it Being somewhat empirical in nature an empiricist and occasionally heard to quote the adage if it works twice it s a law my explanations take this form For many including myself abstract ideas are often better grasped by practical illustration than from yards of theory **System Procedure Errors and Messages Manual** Tandem Computers (Firm),1987 This manual describes system procedure error codes and error lists system messages traps and the trap error list For each code error list message or trap it provides an explanation of the cause a discussion of the effect on the system and suggestions for corrective action or response **User's Manual for Computer Code FAMULS (Fault Tree for Multi-Loop Systems)** Kumamoto, Henley, Inoue,1981 *Error-Correcting Codes* W.
