Computation Works The Building Of Algorithmic Thought:

Computation Works Xavier De Kestelier, Brady Peters, 2013-04-15 Architects are now taking advantage of the computer in new ways through experimentation with algorithmic and simulation driven design *Computation Works The Building of Algorithmic Thought* focuses on this emerging theme in design practice showcasing built and soon to be built projects and providing a state of the art in computational design Computational design is considered to be first a design tool and second a series of instruments that can be applied in the creation of architecture It allows architects to incorporate performance analysis and knowledge about material tectonics and the parameters of production machinery Moving towards a new role as hybrid practitioners architects are taking concepts from other disciplines and customising architectural and other CAD software In addition to the discussion of built projects a further series of texts examines new custom software instruments New digital tools provide new modes of representation new methods of evaluation and new techniques for design exploration The development of new computational tools can create more responsive designs allowing architects to explore new design options and to analyse architectural decisions during the design process This issue raises important questions such as How is computation changing the way architects design Are the design tools and methods related to the result What is computational design in the context of architectural practice and How is computation changing the processes of design and construction

The Changing Shape of Practice Michael U. Hensel, Fredrik Nilsson, 2016-04-14 Architectural practices worldwide have to deal with increasingly complex design requirements How do practices acquire the ability to do so *The Changing Shape of Practice* provides a handbook of examples for practices that wish to integrate more research into their work and a reference book for students that seek to prepare themselves for the changing shape of practice in architecture It addresses the increasing integration of research undertaken in architectural practices of different

sizes ranging from small to very large practices from the UK USA Europe and Asia The book is organized according to the size of the practices which is significant in that it addresses the different structures and resourcing requirements that are enabled by specific practice sizes as this determines and constrains the type scope and modes of research available to a given practice The practices covered include Woods Bagot Perkins Will White AECOM UN Studio Shop Architects PLP Architecture Kieran Timberlake 3XN ONL AZPML Thomas Herzog Partners Herreros Arquitectos Spacescape OCEAN Design Research Association By taking stock of the current shape of practice the book provides essential information for professional architects who are integrating research into their practice *Computing the Environment* Brady Peters, Terri

Peters, 2018-03-14 *Computing the Environment* presents practical workflows and guidance for designers to get feedback on their design using digital design tools on environmental performance Starting with an extensive state of the art survey of what top international offices are currently using in their design projects this book presents detailed descriptions of the tools algorithms and workflows used and discusses the theories that underlie these methods Project examples from Transsolar Klimaengineering Buro Happold s SMART Group Behnisch Behnisch Architects Thomas Herzog Autodesk Research are contextualized with quotes and references to key thinkers in this field such as Eric Winsberg Andrew Marsh Michelle Addington and Ali Malkawi **PRACTICE: Computational Processes in Architecture and Design** Michael

Riggin, 2016-06-19 Conference Proceedings of the 2015 PRACTICE Symposium of Computational Processes in Architecture and Design chaired by Rajaa Issa and Michael Riggin Includes papers presented at the conference and a poster session of work Papers included Essential Education for Computational Design in Architecture by Rajaa Issa FPD First Person Designer by Ben Regnier Dynamic Acoustics From Parametric Design to Digital Fabrication by Erik Luhtala Immersive Environments and Gestural Modeling by P Casey Mahon Dynamic Architectural Systems by Anthony Mull Urban Acupuncture Through Algorithmic Zoning by Ryan Stangl Computational Architecture Quantifying the Qualitative by Hannah Hobbs and Practical Deformation A Study of Wood Bending Techniques Through Computational Logic by Jose Villamizar Poster session includes work by Andrew Reeder Erik Luhtala Anthony Mull Roger Flores and student work from courses taught by Rajaa Issa and Michael Riggin *Handbook of Research on Visual Computing and Emerging Geometrical Design Tools* Amoroso,

Giuseppe, 2016-04-11 Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images 3D models and other computer graphics These ideas are experiencing a revival due to emergent technologies and applications available to developers Based in traditional forms of design and architecture these fields are currently experiencing a bounty of new research based on old principles The Handbook of Research on Visual Computing and Emerging Geometrical Design Tools seeks to add to this knowledge base by considering these technologies from a designer s perspective rather than reiterating the principles of computer science It combines aspects of geometry and representation with emerging tools for CAD generation and visualization while addressing the digital heritage of such fields This book is an

invaluable resource for developers students of both graphic and computer generated design researchers and designers

Post-Parametric Automation in Design and Construction Alfredo Andia, Thomas Spiegelhalter, 2014-11-01

Automation a mixture of algorithms robots software and avatars is transforming all types of jobs and industries This book responds to one critical question for the design and construction industry how are architects engineers and contractors using information technology to further automate their practices Addressing the use of new digital technologies particularly parametric automation for design and construction in the building industry this book looks at how technologically advanced architectural and engineering practices are semi automating their design processes by using sophisticated algorithms to transform their workflows The book also documents a set of firms that are further advancing automation by using pre fabrication modularization and custom designs via robotics
