Darwinism Evolving Systems Dynamics And The Genealogy Of Natural Selection:

Darwinism Evolving David J. Depew, Bruce H. Weber, 1995 *Darwinism and the Divine* Alister E. McGrath, 2011-02-28

Darwinism and the Divine examines the implications of evolutionary thought for natural theology from the time of publication of Darwin's *On the Origin of Species* to current debates on creationism and intelligent design. Questions whether Darwin's theory of natural selection really shook our fundamental beliefs or whether they served to transform and illuminate our views on the origins and meaning of life. Identifies the forms of natural theology that emerged in 19th century England and how they were affected by Darwinism. The most detailed study yet of the intellectual background to William Paley's famous and influential approach to natural theology set out in 1802. Brings together material from a variety of disciplines including the history of ideas, historical and systematic theology, evolutionary biology, anthropology, sociology and the cognitive science of religion. Considers how Christian belief has adapted to Darwinism and asks whether there is a place for design both in the world of science and the world of theology. A thought provoking exploration of 21st century views on evolutionary thought and natural theology written by the world renowned theologian and bestselling author. *From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms* Momme von Sydow, 2012

Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken. This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology, philosophy of science and economics. Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage. This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms, the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism. Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection. Paradoxically Darwin's theory is a static non evolutionary theory of evolution. The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher's *Drawing Hands* on the cover. This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments. This book first develops a radically Darwinian approach then criticises this approach from within. Even Darwinism has a tendency to transcend itself. Although the book addresses several empirical issues it does not challenge particular findings. Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light. It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics. Publisher's description **The Rise of Chance in Evolutionary Theory** Charles H. The Evolution of Agency and Other Essays Kim Sterelny, 2001 This book presents a collection of linked essays written by one of the leading philosophers of biology Kim Sterelny on the topic of biological evolution The first half of the book explores most of the main theoretical controversies about evolution and selection Sterelny argues that genes are not the only replicators non genetic inheritance is also extremely important and is no mere epiphenomenon of gene selection The second half of the book applies some of these ideas in considering cognitive evolution Concentrating on the mental capacities of simpler animals rather than those of humans Sterelny argues for a general distinction between detection and representation and that the evolution of belief like that of representation can be decoupled from the evolution of preference These essays some never before published form a coherent whole that defends not just an overall conception of evolution but also a distinctive take on cognitive evolution
