"Cancer – basic science and clinical aspects" by Craig Almeida and Sheila Barry is a short, introductory text for individuals from a variety of science and clinical backgrounds, pitched at the undergraduate level. Given the scope of the target audience, it includes a number of basic science introductory chapters, leading into more clinically focused chapters on selected cancer subtypes. The text is therefore "translational", moving from biology to the bedside. While solidly covering the basics, the text also has a strong individual flavor. The writing style is informal, replete with text boxes explaining terminology, or providing anecdotes or examples to illustrate themes in the main text. As discussed in greater detail below, the authors add to the more obviously essential subjects reflections upon policy, politics, economics, and historical events of potential interest to the reader.

However, the basics are not neglected. The initial chapters concentrate upon the historical background to cancer, as well as cell structure, metabolism, and function. Following this, there is a brief introduction to the human genome, the central dogma of molecular biology, and the role of both somatic and germline genetics in cancer. There is a solid chapter on tumor suppressor genes and oncogenes, which covers most of the major accepted examples. The authors then move to the basic concepts of cancer screening, tumor staging, and treatment modalities, thus concluding the introductory chapters. For some, these early sections will be dense to the point of being cryptic. While the sections on basic biology are necessarily brief summaries of complex and rapidly evolving knowledge,

the authors provide references to good texts providing more detail on both cell biology and tumor biology. There is a strong effort to make the concepts accessible and the language intelligible without specialized knowledge.

By and large, there is good coverage of the major topics in the basic science of cancer. We would like to have seen mention in the sections on cancer biology (Chapters 4 and 5) of the stem cell hypothesis of cancer, and of the role of the immune system in tumorigenesis. The major hallmarks of cancer defined by Hanahan and Weinberg [1] are well outlined here, but cancer, stem cell biology, and immunosurveillance constitute new additions, as well as very active and current areas of cancer research with implications for the development of targeted therapies. The importance of these fields is emphasized by the considerable investments of the pharmaceutical industry into anti-cancer strategies that exploit these concepts. Moreover, for the target audience for this book, which is likely to disproportionately represent future clinician scientists, such an omission is particularly relevant.

Other areas of concern include the inadequate reference to molecularly targeted therapeutics in the chapter on cancer treatment modalities (Chapter 7). This is surprising, given the importance of the relationship between basic and clinical research, which is such a strong feature of this text. The term biological therapy is defined as immunotherapy (p. 163). This is debatable, as the meaning of the term "biological therapy" is unclear. For example, where do the small molecule antagonists fit? Are they not "biological"? There is no mention of kinase inhibitors in this

Lung Cancer: Basic and Clinical Aspects Heine H. Hansen, 2012-12-06 Lung cancer is one of the biggest challenges in oncology today The challenge is due to the recognition of the possibility of prevention in at least 70-80 % of all the cases and the extreme difficulties encountered in the treatment of this neoplasm Despite the knowledge of prevention measures such as cessation of cigarette smoking the incidence continues to increase in many countries The increase is particularly notable in females in the westernized countries where the death rate in females in certain regions surpasses that of breast cancer Furthermore in many developing countries lung cancer is now being diagnosed with increasing frequency in both sexes and it is expected to be a major cause of death in those countries later in this century or the beginning of next century if the tobacco consumption will continue its rapid rise With respect to therapy the 1970s brought considerable progress in understanding of the clinical behaviour of lung cancer thereby establishing the importance of distinguishing between the major histologic types Therapeutic advancement was particularly experienced in small cell carcinoma with the introduction of combination chemotherapy after this special disease entity among lung cancers was recognized as being a disseminated disease in almost all cases at the time of diagnosis It was expected that the improvement in therapy would have continued in the early 1980s not only for small cell lung cancer but also for the other cell types

Skin Cancer: Basic Science, Clinical Research and Treatment Claus Garbe, Stefan Schmitz, Constantin E. Orfanos, 2012-12-06 In the past two decades considerable interest in skin cancer has developed in the public and scientific communities There may have been several reasons for this The rise in the global incidence of cutaneous cancers New molecular biology techniques resulting in a better understanding of pathogenesis and improved diagnostic procedures The advent of new pathological entities e g the endemic form of Kaposi s sarcoma A constantly increasing range of therapeutic modalities providing even more efficacious treatment and management of skin cancers As N E Fusenig describes in the first chapter of this volume basic research is only beginning to unravel the complex mechanism involved in cellular dedifferentiation and tumor progression Progress is dearly needed especially in dermatology where the rise in the incidence of epithelial tumors has inflated the overall skin cancer incidence The incidence of tumors of the skin exceeds that of all other neoplasias in humans with recreational sun exposure being a suspected primary cause Several studies on the effects of UV radiation have been included at the beginning of this volume Even the role of long wavelength UV UVA has become a focus of research activities The main concern is that the low carcinogenicity of UVA in comparison to UVB may be outweighed and exceeded in its effects by increased UV A exposure e g The Emperor of All Maladies Siddhartha Mukherjee, 2011-08-09 This edition includes a new interview with the author P 4 of cover

Recent Advances In Prostate Cancer: Basic Science Discoveries And Clinical Advances Donald J Tindall, Peter T Scardino, 2011-07-19 This book effectively summarizes our knowledge of recent advances in prostate cancer It focuses on our state of the art understanding of risk factors prevention detection prognosis and treatment of prostate cancer and identifies basic science findings that are

being translated into clinical practice In addition the book singles out key areas of research that have potential for clinical translation Both basic scientists and clinicians will be invited to provide up to date reviews in each area of prostate cancer During the last decade the pace of clinical discovery and the scientific advances in prostate cancer have been very rapid For instance currently there are more than 100 drugs in the pharmaceutical pipeline that have the potential for clinical management of prostate cancer Therefore it has been very difficult for clinicians and basic scientists to keep pace with the field as a whole Recently some of these discoveries are already having an impact on clinical practice For example the discovery of the androgen receptor gene amplification in prostate cancer has led to the development of a super antiandrogen which is being tested in clinical trials Also recent knowledge of androgen synthesis in prostate cancer cells has led to clinical trials with steroid metabolism inhibitors Finally robotic surgery has also dramatically changed clinical practice Thus this important book serves to provide readers with a one stop overview of the field of prostate cancer research and its translation into the clinical arena
