Cancer Chemoprevention Gary J. Kelloff, Ernest T. Hawk, Caroline C. Sigman, 2008-08-17 Despite significant advances in cancer treatment and measures of neoplastic progression drug effect or early detection overall cancer incidence has increased pharmacodynamic markers and markers that measure cancer associated morbidity is considerable and overall prognosis as well as predict responses to specific therapy cancer survival has remained relatively flat over the past All these biomarkers have the potential to greatly augment several decades 1 2 However new technology the development of successful chemoprevention therapies allowing exploration of signal transduction pathways but two specific types of biomarkers will have the most identification of cancer associated genes and imaging of immediate impact on successful chemopreventive drug tissue architecture and molecular and cellular function is development those that measure the risk of developing increasing our understanding of carcinogenesis and cancer invasive life threatening disease and those whose progression This knowledge is moving the focus of cancer lation can reasonably predict clinical benefit and therapeutics including cancer preventive treatments to therefore serve as surrogate endpoints for later occurring drugs that take advantage of cellular control mechanisms clinical disease Thus far the biomarker that best measures to selectively suppress cancer progression

Mitochondria as Targets for Phytochemicals in Cancer Prevention and Therapy Dhyan Chandra, 2013-12-11 This book highlights the importance of phytochemicals and mitochondria in cancer prevention and therapy. Recent scientific discoveries have identified that naturally occurring biologically active compounds, i.e. phytochemicals, target multiple steps of tumorigenesis leading to the inhibition or delay in cancer progression. Mitochondria, organelles within a cell, are a critical target for phytochemicals in regulating the initiation, promotion, and progression of cancer. The book is divided into three parts to better communicate the important findings related to phytochemicals and mitochondria in cancer research. The first part describes updates on environmental and genetic factors causing cancer initiation and progression, the role of mitochondria function in regulating the process of tumorigenesis, and the role of mitochondria in regulating cell death such as apoptosis, autophagy, and necroptosis. The second part focuses on the elucidation of key target proteins that could be exploited for cancer prevention and the role of phytochemicals in cancer prevention, updates on basic research related to phytochemicals' action critical for cancer prevention, and updates on translational knowledge on cancer prevention by phytochemicals. The third part provides updates on phytochemicals targeting mitochondria for cancer therapy, an overview of action of phytochemicals on cancer stem cells, updates on the role of microRNA in phytochemicals-based therapy of cancer, and updates on phytochemicals-based translational research on therapy for metastatic cancer.
