## **Climate Myths The Campaign Against Climate Science:**

**Climate Myths** John J. Berger, 2013 *Climate Myths* is both a primer on climate change and a definitive rebuttal of climate science denial. The book can thus be used to help educate students, teachers, and the general public about the controversy over climate change. *Climate Myths* puts the campaign against climate science in historical, political, and economic context and juxtaposes the claims of climate change deniers with the facts about climate change as revealed by authoritative climate science. *Climate Myths* dispels common misunderstandings about climate change and spotlights the companies, organizations, and individuals who have promoted climate myths in the course of their highly successful multimillion-dollar climate disinformation campaigns. Drawing on the principles and achievements of climate science, *Climate Myths* summarizes the imminent threat of rapid climate change, pointing readers toward needed action.

**Solving the Climate Crisis** John J. Berger, 2023-10-24 Groundbreaking solutions to the climate crisis from scientists, engineers, civic leaders, entrepreneurs, and activists offering hope to all readers concerned about our planet's future. Offers practical actions that reflect technological and economic advances with an introduction by former United States senator Russ Feingold. *Solving the Climate Crisis* is a hopeful and critical resource that makes a convincing and detailed case that there is a path forward to save our environment. Illustrating the power of committed individuals and the necessity for collaborative government and private sector climate action, the book focuses on three essential areas: The technological dimension: move to 100% clean renewable energy as fast as we possibly can through innovations like clean steel, green cement, and carbon reuse companies. The ecological dimension: enhance and protect natural ecosystems, forests, and agricultural lands to safely store greenhouse gases and restore soils, transforming how we grow, process, and consume food. The social dimension: update and create new laws, policies, and economic measures to recenter human values and reduce environmental and social injustice. Based on more than 6 years of research, Berger traveled the nation and abroad to interview governors, mayors, ranchers, scientists, engineers, business leaders, energy experts, and financiers, as well as carbon farmers, solar and wind innovators, forest protectors, non-profit leaders, and activists. With real-world examples, an explanation of cutting-edge technologies in solar and wind, and political organizing tactics, *Solving the Climate Crisis* provides a practical road map for how we effectively combat climate change. Replacing the fossil fuel system with a newly invigorated, modernized clean energy economy will produce tens of millions of new jobs and save trillions of dollars. Protecting the climate is thus potentially the greatest economic opportunity of our time.

**The Planetary Emergency** Kent D. Shifferd, 2021-01-13 Earth and its inhabitants face an unprecedented crisis: the human-caused destruction of the planet's life support systems. Deteriorating climate bringing super storms, mass forest fires, melting glaciers, droughts, extreme heat, and rising seas; a decline in food production, soil loss, water pollution, and declining fisheries all threaten the future of life on earth with a looming extinction event not seen for 60 million years. Beginning in the 17th century, we developed a civilization based on radical materialism, exploitation of natural resources, and

the myth of endless economic growth For all its technological wonders this hypercivilization has proven unsustainable This book explores ways we can create an ecocivilization compatible with the laws and limits of nature a new way of living already developing with new technologies new forms of social organization and a new story about ourselves and the Earth **What**

Sovacool, Roman V. Sidortsov, Benjamin R. Jones, 2013-12-04 This book applies concepts from ethics justice and political philosophy to five sets of contemporary energy problems cutting across time economics politics geography and technology In doing so the authors derive two key energy justice principles from modern theories of distributive justice procedural justice and cosmopolitan justice The prohibitive principle states that energy systems must be designed and constructed in such a way that they do not unduly interfere with the ability of people to acquire those basic goods to which they are justly entitled The affirmative principle states that if any of the basic goods to which people are justly entitled can only be secured by means of energy services then in that case there is also a derivative entitlement to the energy services In laying out and employing these principles the book details a long list of current energy injustices ranging from human rights abuses and energy related civil conflict to energy poverty and pervasive and growing negative externalities The book illustrates the significance of energy justice by combining the most up to date data on global energy security and climate change including case studies and examples from the electricity supply transport and heating and cooking sectors with appraisals based on

centuries of thought about the meaning of justice in social decisions      *Enlightenment* Carsten Burmeister,
