Cleanroom software engineering is a process for developing and certifying high reliability software Combining theory based engineering technologies in project management incremental development software specification and design correctness verification and statistical quality certification the Cleanroom process answers today s call for more reliable software and provides methods for more cost effective software development Cleanroom originated with Harlan D Mills an IBM Fellow and a visionary in software engineering Written by colleagues of Mills and some of the most experienced developers and practitioners of Cleanroom Cleanroom Software Engineering provides a roadmap for software management development and testing as disciplined engineering practices This book serves both as an introduction for those new to Cleanroom and as a reference guide for the growing practitioner community Readers will discover a proven way to raise both quality and productivity in their software intensive products while reducing costs Highlights Explains basic Cleanroom theory Introduces the sequence based specification method Elaborates the full management development and certification process in a Cleanroom Reference Model CRM Shows how the Cleanroom process dovetails with the SEI s Capability Maturity Model for Software CMM Includes a large case study to illustrate how Cleanroom methods scale up to large projects

Mechanizing Proof Donald MacKenzie, 2004-01-30 Most aspects of our private and social lives our safety the integrity of the financial system the functioning of utilities and other services and national security now depend on computing But how can we know that this computing is trustworthy In *Mechanizing Proof* Donald MacKenzie addresses this key issue by investigating the interrelations of computing risk and mathematical proof over the last half century from the perspectives of history and sociology His discussion draws on the technical literature of computer science and artificial intelligence and on extensive interviews with participants MacKenzie argues that our culture now contains two ideals of proof proof as traditionally conducted by human mathematicians and formal mechanized proof He describes the systems constructed by those committed to the latter ideal and the many questions those systems raise about the nature of proof He looks at the primary social influence on the development of automated proof the need to predict the behavior of the computer systems upon which human life and security depend and explores the involvement of powerful organizations such as the National Security Agency He concludes that in mechanizing proof and in pursuing dependable computer systems we do not obviate the need for trust in our collective human judgment

Recent Advances in Intrusion Detection Herve Debar, Ludovic Me, S. Felix Wu, 2003-06-26 Since 1998 RAID has established its reputation as the main event in research on intrusion detection both in Europe and the United States Every year RAID gathers researchers security vendors and security practitioners to listen to the most recent research results in the area as well as experiments and deployment issues This year RAID has grown one step further to establish itself as a well known event in the security community with the publication of hardcopy proceedings RAID 2000 received 26 paper submissions from 10 countries and 3 continents The program committee selected 14 papers for publication and examined 6 of them for presentation In addition RAID 2000 received 30 extended abstracts proposals 15 of these extended abstracts were accepted for presentation tended abstracts are available on the website of the RAID symposium series <http://www.raid-symposium.org> We would like to thank the technical program committee for the help we received in reviewing the papers as well as all the authors for their participation and submissions even for those rejected As in previous RAID symposiums the program alternates between fundamental research issues such as new technologies for intrusion detection and more practical issues linked to the deployment and operation of intrusion detection systems in a real environment Five sessions have been devoted to intrusion detection technology including modeling data mining and advanced techniques

Survey Automation National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Oversight Committee for the Workshop on Survey Automation, 2003-06-11 For over 100 years the evolution of modern survey methodology using the theory of representative sampling to make inferences from a part of the population to the whole has been paralleled by a drive toward automation harnessing

technology and computerization to make parts of the survey process easier faster and better The availability of portable computers in the late 1980s ushered in computer assisted personal interviewing CAPI in which interviewers administer a survey instrument to respondents using a computerized version of the questionnaire on a portable laptop computer Computer assisted interviewing CAI methods have proven to be extremely useful and beneficial in survey administration However the practical problems encountered in documentation and testing CAI instruments suggest that this is an opportune time to reexamine not only the process of developing CAI instruments but also the future directions of survey automation writ large

Building Systems from Commercial Components Kurt C. Wallnau, Scott Hissam, Robert C. Seacord, 2002 A principal source of risk in component based software design say Wallnau and two other technicians at the institute Scott A Hissam and Robert C Seacord is a lack of knowledge about how components should be integrated and how they behave when integrated To mitigate that risk they introduce several concepts among them the component ensemble as a design abstraction blackboards as a fundamental design notation and a process for exposing design risk They speak to practicing and student software engineers c Book News Inc CMM in Practice Pankaj Jalote, 2000 Project initiation Project planning Project execution and termination *CMMI Distilled* Dennis M.
