Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment, product development, sustainable manufacturing, and end of life management. The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products, services, and processes taking into account local capabilities and constraints to achieve an economically, socially, and environmentally sustainable society in a global perspective. Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions. Products and services need to be addressed that ensure a high standard of living everywhere. Resources required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities, as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.

Do It Smart Jurgen Ringbeck, 1999-12-22 A decade ago manufacturing companies had visions of paperless offices automated plants and virtual enterprises But the euphoria quickly evaporated when these visions failed to materialize Now from in depth interviews in a worldwide survey of seventy manufacturing firms a research team from the prestigious consulting group McKinsey Company concludes that far from being a failure information technology IT can be a vital strategic weapon in the manufacturing sector just as it has proved to be in service industries In *Do IT Smart* experts Rolf Dieter Kempis and Jurgen Ringbeck along with the McKinsey team identify four cultures of IT users stars big spenders cautious spenders and laggards based on how efficiently and effectively the users manage IT The stars stand out because their strong command of IT means they are better able to manage core processes such as R D sales and service and order processing which in turn produces tangible payoffs in profitability growth and market share From their study of star performers the authors formulate seven rules for developing a superior IT organization First they argue managers must make IT a top management issue and second a priority in product development IT must be viewed as a strategic tool so that IT strategy can be aligned with business strategy Clear objectives must be set and core business processes redesigned Warning

that IT is reaching saturation in administrative applications the authors describe how it is far more profitable to integrate IT into marketing sales and customer service Finally they describe how all these elements must be brought together into a lean customer oriented IT network McKinsey s breakthrough study shows that as organizations are increasingly overwhelmed with data IT will become more of a dividing line between the winners and the losers IT stars will make quantum leaps in effectiveness while poor management of IT results in a cost explosion Managers and information officers who want their business to keep and gain the competitive edge IT offers need this unprecedented insight into how to Do IT Smart
