An Active Approach with Projects

Stephen Hilbert, Diane D. Schwartz, Stan Seltzer,
John Macell and Eric Robinson

Calculus: An Active Approach with Projects contains student and instructor material for the delivery of a two-semester calculus sequence at the undergraduate level. It can be used in conjunction with any textbook. It was written with the view that students who are actively involved inside and outside the classroom are more likely to succeed, develop deeper conceptual understanding, and retain knowledge better than students who are passive recipients of information.

The volume contains two main student sections. The first contains activities usually done in class (in groups or individually). The second section contains longer projects where students, usually in groups, work outside the classroom.

In addition to facilitating active student learning, the material will foster

- student comprehension of calculus as a unified subject by providing opportunities for students to make connections between different calculus topics. Unifying threads appear throughout the activities and projects.
- student thinking and communication through use of activities and projects where students need to organize their thinking, determine problem-solving strategies, and clearly communicate results to others.

Instructor materials contained in the volume include comments and notes on each project and activity, guidelines on their implementation, and a sample curriculum which incorporates a collection of activities and projects.
