Creating Green Roadways James L. Sipes, Matthew L. Sipes, 2013-01-01 Roads and parking lots in the United States cover more ground than the entire state of Georgia And while proponents of sustainable transit often focus on getting people off the roads they will remain at the heart of our transportation systems for the foreseeable future In Creating Green Roadways James and Matthew Sipes demonstrate that roads don t have to be the enemy of sustainability they can be designed to minimally impact the environment while improving quality of life The authors examine traditional utilitarian methods of transportation planning that have resulted in a host of negative impacts from urban sprawl and congestion to loss of community identity and excess air and water pollution They offer a better approach one that blends form and function Creating Green Roadways covers topics including transportation policy the basics of green road design including an examination of complete streets public involvement road ecology and the economics of sustainable roads Case studies from metropolitan suburban and rural transportation projects around the country along with numerous photographs illustrate what makes a project successful The need for this information has never been greater as more than thirty percent of America s major roads are in poor or mediocre condition more than a quarter of the nation s bridges are structurally deficient or functionally obsolete and congestion in communities of all sizes has never been worse Creating Green Roadways offers a practical strategy for rethinking how we design plan and maintain our transportation infrastructure

Urban Soils Rattan Lal, B. A. Stewart, 2017-10-18 Globally 30% of the world population lived in urban areas in 1950 54% in 2016 and 66% projected by 2050 The most urbanized regions include North America Latin America and Europe Urban encroachment depletes soil carbon and the aboveground biomass carbon pools enhancing the flux of carbon from soil and vegetation into the atmosphere Thus urbanization has exacerbated ecological and environmental problems Urban soils are composed of geological material that has been drastically disturbed by anthropogenic activities and compromised their role in the production of food aesthetics of residential areas and pollutant dynamics Properties of urban soils are normally not favorable to plant growth the soils are contaminated by heavy metals and are compacted and sealed Therefore the quality of urban soils must be restored to make use of this valuable resource for delivery of essential ecosystem services e g food water and air quality carbon sequestration temperature moderation biodiversity Part of the Advances in Soil Sciences Series **Urban Soils** explains properties of urban soils assesses the effects of urbanization on the cycling of carbon nitrogen and water and the impacts of management of urban soils soil restoration urban agriculture and food security evaluates ecosystem services provisioned by urban soils and describes synthetic and artificial soils
