Концептуально-терминологический аспект изучения дорожно-строительных специальностей Щербакова И. В., Фомина О. А., 2021-06-01 23 03 01 23 03 03 *History of Romanian Technology and Industry* Dorel Banabic, 2023-09-21 This volume showcases the valuable achievements of the Romanian technology and industry worldwide. It started from the premise that the history of Romanian technique is scarcely known outside the borders of Romania. The main Romanian contributions to the world's technological heritage are missing except for a few names in the field of aviation from the great encyclopedias and dictionaries published worldwide. This is due among other reasons to the insufficient promotion in widely spoken languages of the history of Romanian technology. The multidisciplinary approach of the volumes means that the field of technology had to be split into several branches. The present volume includes the following industries: electrical engineering, energy technology, biomedicine, maritime and rail transport, automotive industry, aviation. The history of engineering societies, of engineering education, of intellectual property and of inventions, as well as a synopsis of the personalities of Romanian engineering, have been tackled in separate chapters. For each field, the collaboration of authors who have already published a history of their field. Certain chapters were drafted with the aid of specialists who have played the part of policy makers in the elaboration of development strategies for Romania and who are familiar not only with the facts and the history of their field but also with the philosophy behind its development. *The 30th SIAR International Congress of Automotive and Transport Engineering* Ilie Dumitru, Dinu Covaciu, Laurențiu Racila, Adrian Rosca, 2019-10-15 This proceedings book includes papers that cover the latest developments in automotive vehicles and environment, advanced transport systems and road traffic, heavy and special vehicles, new materials, manufacturing technologies and logistics, and advanced engineering methods. Authors of the papers selected for this book are experts from research industry and universities coming from different countries. The overall objectives of the presentations are to respond to the major challenges faced by the automotive industry and to propose potential solutions to problems related to automotive technology, transportation and environment, and road safety. The congress is organized by SIAR Society of Automotive Engineers from Romania in cooperation with SAE International. The purpose is to gather members from academia, industry and government and present their possibilities for investigations and research in order to establish new future collaborations in the automotive engineering and transport domain. This proceedings book is just a part of the outcomes of the congress. The results presented in this proceedings book benefit researchers from academia and research institutes, industry specialists, Ph.D. students and students in Automotive and Transport Engineering programs. **Spain: Selected Issues** International Monetary Fund.
