Galois Module Structure of Algebraic Integers A. Fröhlich, 2012-12-06 In this volume we present a survey of the theory of Galois module structure for rings of algebraic integers This theory has experienced a rapid growth in the last ten to twelve years acquiring mathematical depth and significance and leading to new insights also in other branches of algebraic number theory The decisive take off point was the discovery of its connection with Artin L functions We shall concentrate on the topic which has been at the centre of this development namely the global module structure for tame Galois extensions of numberfields in other words of extensions with trivial local module structure The basic problem can be stated in down to earth terms the nature of the obstruction to the existence of a free basis over the integral group ring normal integral basis Here a definitive pattern of a theory has emerged central problems have been solved and a stage has clearly been reached when a systematic account has become both possible and desirable Of course the solution of one set of problems has led to new questions and it will be our aim also to discuss some of these We hope to help the reader early on to an understanding of the basic structure of our theory and of its central theme and to motivate at each successive stage the introduction of new concepts and new tools

Voronov, 2012-11-05 The Biannual workshops on Geometric Methods in Physics are among the most important meetings in the field. Every year some 80 to 100 participants from both mathematics and physics join to discuss new developments and to interchange ideas. This volume contains contributions by selected speakers at the XXX meeting in 2011 as well as additional review articles and shows that the workshop remains at the cutting edge of ongoing research. The 2011 workshop focussed on the works of the late Felix A. Berezin (1931-1980) on the occasion of his 80th anniversary as well as on Bogdan Mielnik and Stanisław Lech Woronowicz on their 75th and 70th birthday respectively. The groundbreaking work of Berezin is discussed from today's perspective by presenting an overview of his ideas and their impact on further developments. He was among other fields active in representation theory, general concepts of quantization and coherent states, supersymmetry and supermanifolds. Another focus lies on the accomplishments of Bogdan Mielnik and Stanisław Lech Woronowicz. Mielnik's geometric approach to the description of quantum mixed states, the method of quantum state manipulation and their important implications for quantum computing and quantum entanglement are discussed as well as the intricacies of the quantum time operator. Woronowicz's fruitful notion of a compact quantum group and related topics are also addressed.
