Data For The Public Good:

Privacy, Big Data, and the Public Good Julia Lane, Victoria Stodden, Stefan Bender, Helen Nissenbaum, 2014-06-09 Massive amounts of data on human beings can now be analyzed Pragmatic purposes abound including selling goods and services winning political campaigns and identifying possible terrorists Yet big data can also be harnessed to serve the public good scientists can use big data to do research that improves the lives of human beings improves government services and reduces taxpayer costs In order to achieve this goal researchers must have access to this data raising important privacy questions What are the ethical and legal requirements What are the rules of engagement What are the best ways to provide access while also protecting confidentiality Are there reasonable mechanisms to compensate citizens for privacy loss The goal of this book is to answer some of these questions The book s authors paint an intellectual landscape that includes legal economic and statistical frameworks The authors also identify new practical approaches that simultaneously maximize the utility of data access while minimizing information risk

Server Manifesto Niklas Maak, 2022-06-08 Server farms are to the digital world what castles used to be the seat of power If data is the greatest collective treasure of a digital society basic material for business and politics Why are the places where it is stored still so invisible Together with students from the St delschule in Frankfurt am Main Niklas Maak shows what the future of the most important new building typology of the twenty first century might look like and what new collective places a city needs in the age of digitalization This is a historic moment Data has become the most valuable commodity in the world We can t leave it to a handful of tech giants We must conceive of it as a public good and a critical public infrastructure alongside roads electricity water and clean air To that end we need what Niklas Maak calls a Centre Pompidou for the digital age Francesca Bria

GEOValue Jamie Kruse, Joep Crompvoets, Francoise Pearlman, 2017-11-15 Quantifying the social and economic value that geospatial information contributes to modern society is a complex task To construct reliable and consistent valuation measures requires an understanding of the sequence of processes that starts with data acquisition and leads to decision makers choices that impact society GEOValue explores each step in this complex value chain from the viewpoint of domain experts spanning disciplines that range from the technical side of data acquisition and management to the social sciences that provide the framework to assess the benefit to society The book is intended to provide foundational understanding of the techniques and complexities of each step in the process As such it is intended to be assessable to a reader without prior training in data acquisition systems information systems or valuation methods In addition a number of case studies are provided that demonstrate the use of geospatial information as a critical input for evaluation of policy pertaining to a wide range of application areas such as agricultural and environmental policy natural catastrophes e government and transportation systems

Regulating Data Monopolies Jingyuan Ma, 2022-01-24 This book analyzes the business model of enterprises in the digital economy by taking an economic and comparative perspective The aim of this book is to conduct an in depth

analysis of the anti competitive behavior of companies who monopolize data and put forward the necessity of regulating data monopoly by exploring the causes and characteristics of their anti competitive behavior It studies four aspects of the differences between data monopoly and traditional monopolistic behavior namely defining the relevant market for data monopolies the entry barrier the problem of determining the dominant position of data monopoly and the influence on consumer welfare It points out the limitations of traditional regulatory tools and discusses how new regulatory methods could be developed within the competition legal framework to restrict data monopolies It proposes how economic analytical tools used in traditional anti monopoly law are facing challenges and how competition enforcement agencies could adjust regulatory methods to deal with new anti competitive behavior by data monopolies **Governing Digitally Integrated**

Genetic Resources, Data, and Literature Jerome H. Reichman, Paul F. Uhrlir, Tom Dedeurwaerdere, 2016-05-19 The free exchange of microbial genetic information is an established public good facilitating research on medicines agriculture and climate change However over the past quarter century access to genetic resources has been hindered by intellectual property claims from developed countries under the World Trade Organization's TRIPS Agreement 1994 and by claims of sovereign rights from developing countries under the Convention on Biological Diversity CBD 1992 In this volume the authors examine the scientific community's responses to these obstacles and advise policymakers on how to harness provisions of the Nagoya Protocol 2010 that allow multilateral measures to support research By pooling microbial materials data and literature in a carefully designed transnational e infrastructure the scientific community can facilitate access to essential research assets while simultaneously reinforcing the open access movement The original empirical surveys of responses to the CBD included here provide a valuable addition to the literature on governing scientific knowledge commons

The Big Data Agenda Annika Richterich, 2018-04-13 This book highlights that the capacity for gathering analysing and utilising vast amounts of digital user data raises significant ethical issues Annika Richterich provides a systematic contemporary overview of the field of critical data studies that reflects on practices of digital data collection and analysis The book assesses in detail one big data research area biomedical studies focused on epidemiological surveillance Specific case studies explore how big data have been used in academic work The Big Data Agenda concludes that the use of big data in research urgently needs to be considered from the vantage point of ethics and social justice Drawing upon discourse ethics and critical data studies Richterich argues that entanglements between big data research and technology internet corporations have emerged In consequence more opportunities for discussing and negotiating emerging research practices and their implications for societal values are needed [Access to Non-Summary Clinical Trial Data for Research Purposes Under EU Law](#) Daria Kim, 2021-10-19 This book draws a unique perspective on the regulation of access to clinical trial data as a case on research and knowledge externalities Notwithstanding numerous potential benefits for medical research and public health many jurisdictions have struggled to ensure access to clinical trial data even at the level of the trial results Pro

access policy initiatives have been strongly opposed by research based drug companies arguing that mandatory data disclosure impedes their innovation incentives Conventionally access to test data has been approached from the perspective of transparency and research ethics The book offers a complementary view and considers access to individual patient level trial data for exploratory analysis as a matter of research and innovation policy Such approach appears to be especially relevant in the data driven economy where digital data constitutes a valuable economic resource The study seeks to define how the rules of access to clinical trial data should be designed to reconcile the policy objectives of leveraging the research potential of data through secondary analysis on the one hand and protecting economic incentives of research based drug companies on the other hand Overall it is argued that the mainstream innovation based justification for exclusive control over the outcomes of research and development can hardly rationalise trial sponsors control over primary data from trials Instead access to such data and its robust analysis should be prioritised
