

Fuel Filter

From the fuel damper, the fuel passes through the line to the engine compartment where it goes through a special filter, mounted on the right hand fender panel.

This filter is critical to proper engine operation, since if even the smallest particle becomes wedged in one of the injectors, the operation of that cylinder might be adversely affected. This filter should be changed every 25,000 miles on 1975—77 models, and every 30,000 miles on 1978 and later models. Sampling the fuel trapped in the fuel filter, both on the inlet and on the outlet side of the filter, will show you the condition of the fuel in the system.
