MACHINE LEARNING FOR CYBER SECURITY DETECTING ANOMALIES AND INTRUSIONS Dr. Aadam Quraishi, Vikas Raina, Aditya Mahamkali, Arijeet Chandra Sen, 2023-12-12 Because the Internet is so widespread in modern life and because of the expansion of technologies that are tied to it such as smart cities self driving cars health monitoring via wearables and mobile banking a growing number of people are becoming reliant on and addicted to the Internet In spite of

the fact that these technologies provide a great deal of improvement to individuals and communities they are not without their fair share of concerns By way of illustration hackers have the ability to steal from or disrupt companies therefore inflicting damage to people all across the world if they exploit weaknesses As a consequence of cyberattacks businesses can face financial losses as well as damage to their reputation Consequently the security of the network has become a significant concern as a result Organizations place a significant amount of reliance on tried and true technologies such as firewalls encryption and antivirus software when it comes to securing their network infrastructure Unfortunately these solutions are not completely infallible they are merely a first line of security against malware and other sophisticated threats Therefore it is possible that certain persons who have not been sanctioned may still get access which might result in a breach of security For the purpose of preventing intrusion detection computer systems need to be safeguarded against both illegal users such as hackers and legitimate users such as insiders A breach of a computer system may result in a number of undesirable results including the loss of data restricted access to internet services the loss of sensitive data and the exploitation of private resources an initial version of the Intrusion Detection System IDS was constructed In light of the fact that it is a that is essential for the protection of computer networks it has therefore become a subject of study that is widely pursued Given the current condition of cybercrime it is impossible to deny the significance of the intrusion detection system IDS A possible example of how the IDS taxonomy is arranged may be found here The intrusion detection system often known as an IDS is a piece of software or hardware that monitors a computer or network environment searches for indications of intrusion and then notifies the user of any potential threats Utilizing this warning report is something that the administrator or user may do in order to repair the vulnerability that exists inside the system or network In the aftermath of an intrusion it may be purposeful or unlawful to attempt to access the data
