Cell Regulation by Intracellular Signals Stephane Swillens, 2013-11-21 In 1980 the IVth International Cyclic Nucleotide Conference was held in Brussels As this meeting attracted many investigators involved in cyclic nucleotides and calcium role in intracellular regulation it was thought that this opportunity could be used to organize prior to the Congress an in depth introductory course on the subject This was carried out as a NATO Advanced Study Institute The participants included PhD students and MDs engaged in a research training but also fully trained and well known researchers who wanted a refresher

course on the whole subject During the course most of the participants and lecturers asked to be provided with a text summarizing the basic lectures of the course This book was therefore conceived as a basic textbook on the regulation and action of intracellular signal molecules concentrating mainly on cyclic nucleotides and calcium It was deliberately kept at a basic level We would therefore be happy if it could be used as an introduction for interested M D s or Ph D s working in other fields or entering this field and as a general refresher for researchers interested in the subject For this reason very general schemes have been asked of the authors along with reading lists of available reviews rather than extensive bibliographies The editors should like to thank the NATO Scientific Affairs Committee for having supported the course and Mrs Gh Wilmes who prepared the manuscripts S SWILLENS J E

Advanced Topics on Radiosensitizers of Hypoxic Cells A.

Breccia,2012-12-06 In July 1979 the Faculty of Pharmacy of the University of Bologna received a proposal from Professor Breccia to hold an International Conference on Nitroimidazoles Chemistry Pharmacology and Clinical Application Because of the great interest in these drugs in various fields I was very pleased to accept the proposal and to give the conference the sponsorship of the University of Bologna It was an added pleasure to accept the chairmanship of the meeting together with Professors Sensi and Adams At the same time the Minister of Education approved a proposal which also came from the Faculty of Pharmacy to offer an advanced course on the topic Radiosensitizers of Hypoxic Cells This course was subsequently approved by a special Committee of the NATO Scientific Programme as an Advanced Study Institute Since the subject matter of both the conference and the course are closely inter related it was logical to plan the conference as part of the overall course Bringing together specialists from quite different and apparently unrelated fields of research but all with an interest in the study and application of one single group of drugs is a novel idea with intriguing possibilities The volumes of the proceedings include contributions from experts with such diverse interests as synthetic chemistry mechanism of drug action parasitology anaerobic bacteria and protozoa pharmacology and toxicology radiation sensitizers for use in radiotherapy and the development of drugs for use in cancer in general

Mechanisms of DNA Damage and Repair Michael G.

Simic, Lawrence Grossman, Arthur C. Upton, David S. Bergtold, 2013-11-21 This book is based on the papers presented at the conference on Mechanisms of DNA Damage and Repair Implications for Carcinogenesis and Risk Assessment held at the National Bureau of Standards on June 27 1985 This volume deals with mechanisms of DNA damage and repair at the molecular level consequences of unrepaired or misrepaired damage with major emphasis on carcinogenesis drugs which bind selectively to altered and potentially damaging DNA sequences and potential utilization of DNA damage as an endpoint for assessing risks of UV light ionizing radiations chemicals drugs and hazardous agents in foods Because the induction of mutations by radiation and genotoxic chemicals has been observed to follow one hit kinetics in some instances it is generally assumed that any level of exposure to a DNA damaging agent may increase the risk of genetic disease or cancer in an exposed population At the same time however there is evidence that although the DNA of living cells is continually damaged

by natural background radiation free radicals and other naturally occurring processes most of the damage is normally repaired

Structural Molecular Biology David Davies, 2013-03-09 Structural biology is undergoing a revolution in both the sophistication of new biophysical methods and the complexity of problems in biomolecular structure and organization opened up for study These changes are directly attributable to major advances in computer technology computational methods development of high intensity synchrotron radiation sources new magnetic resonance methods laser optical techniques etc Structure function problems previously considered intractable may now be solved As this area of specialisation continues to expand there is a need to review the various physical methods currently being used and developed in structural molecular biology At the same time that individual techniques and their applications become more specialized the need for effective communication between investigators gains in imperative It is vital to forge links among sub disciplines and to emphasise the complementary nature of results observed by different biophysical methods This publication contains the review lectures given at a meeting on Current Methods in Structural Molecular Biology sponsored by NATO as an Advanced Study Institute and by FEBS's Advanced Course No 78 The aim of the meeting was to bring together in a teaching environment students and specialists in diverse biophysical methodologies with the specific purpose of exploring questioning and critically assessing the present and future state of biological structure research The scientific content of the interdisciplinary Study Institute centred around three interrelated aspects biophysical methods and instrumentation their application to biological structure problems and derivation of structural information and insights
