

OUTPUT SHAFT SUPPORT: The most noticeable change of the output shaft support (now called the **OVERDRIVE PISTON RETAINER**) is the size. Where the governor assembly used to be located is now a piston bore for the overrunning clutch piston. The front end of the support has a groove that retains a snap ring that holds a thrust

washer and the low-reverse drum in place. This was done to prevent any fore and aft movement of the low and reverse drum with the redesigned overrunning clutch. On the back, lower right side of retainer is a support for the governor pressure tubes.

VALVE BODY: The valve body transfer plate has been modified so the lower valve body housing can be mounted to it. The lower valve body includes five valves and, an attaching accumulator assembly. Two, SMEC controlled, solenoids are mounted on the lower valve body. One solenoid controls the lock-up torque converter, while the

second solenoid operates the overdrive unit. A, through the case, three pin connector connects the solenoids to the SMEC. The center pin is battery feed, the forward pin is the overdrive solenoid, and the rear pin is the torque converter lock-up solenoid. The SMEC controls the solenoid ground for operation.
