Mignolo, 2021-07-09 In The Politics of Decolonial Investigations Walter D Mignolo provides a sweeping examination of how coloniality has operated around the world in its myriad forms from the sixteenth century to the twenty first Decolonial border

thinking allows Mignolo to outline how the combination of the self fashioned narratives of Western civilization and the hegemony of Eurocentric thought served to eradicate all knowledges in non European languages and praxes of living and being Mignolo also traces the geopolitical origins of racialized and gendered classifications modernity globalization and cosmopolitanism placing them all within the framework of coloniality Drawing on the work of theorists and decolonial practitioners from the Global South and the Global East Mignolo shows how coloniality has provoked the emergence of decolonial politics initiated by delinking from all forms of Western knowledge and subjectivities The urgent task Mignolo stresses is the epistemic reconstitution of categories of thought and praxes of living destituted in the very process of building Western civilization and the idea of modernity The overcoming of the long lasting hegemony of the West and its distorted legacies is already underway in all areas of human existence Mignolo underscores the relevance of the politics of decolonial investigations in and outside the academy to liberate ourselves from canonized knowledge ways of knowing and praxes of living

Developing Mathematical Reasoning Pamela Weber Harris, 2025-02-13 Math is not rote memorizable Math is not random guessable Math is figure out able Author Pam Harris argues that teaching real math math that is free of distortions will reach more students more effectively and result in deeper understanding and longer retention This book is about teaching undistorted math using the kinds of mental reasoning that mathematicians do Memorization tricks and algorithms meant to make math easier are full of traps that sacrifice long term student growth for short lived gains Students and teachers alike have been led to believe that they ve learned more and more math but in reality their brains never get any stronger Using these tricks may make facts easier to memorize in isolation but that very disconnect distorts the reality of math The mountain of trivia piles up until students hit a breaking point Humanity s most powerful system of understanding organizing and making an impact on the world becomes a soul draining exercise in confusion chaos and lost opportunities

Developing Mathematical Reasoning Avoiding the Trap of Algorithms emphasizes the importance of teaching students increasingly sophisticated mathematical reasoning and understanding underlying concepts rather than relying on a set rule for solving problems This book illuminates a hierarchy of mathematical reasoning to help teachers guide students through various domains of math development from basic counting and adding to more complex proportional and functional reasoning Everyone is capable of understanding and doing real math This book Highlights the important mathematical relationships strategies and models for students to develop Offers personal stories reflection sections and extensive practical exercises for easy implementation Includes real math a lot of it to provide teachers with examples they can put to use in their classrooms immediately This book is a valuable resource for educators looking to reach more students by building a strong foundation of mathematical thinking in their students By addressing common misconceptions about math and providing practical strategies for teaching real math this book shows that everyone can use the mathematical relationships they already know to reason about new relationships In other words everyone can math
