Kirk, 1994 *Contemporary Linear Systems Using MATLAB* Robert D. Strum, Donald E. Kirk, 1994 This is a title in the PWS series BookWare Companion Series It is a set of correlated self contained courseware modules covering fundamental concepts in engineering and applied mathematics Students work through example problems electronically and are encouraged to experiment with problems and data in an electronic lab setting Each BookWare Companion features a software script for the electronic examples based on a popular applications software package for the IBM PC or the Macintosh and a printed volume containing computer based exploration exercises and a variety of learning aids and hints The text bolstered by illustrative examples 200 problems and MATLAB exploration exercises on the accompanying data disk should enable students to work with linear systems problems in a virtual laboratory at the computer changing problem values at will in a what if fashion **Systems And Control: An Introduction To Linear, Sampled And Nonlinear Systems** Terry Dougherty, 1995-09-20 The primary function of this book is to serve as a textbook on linear systems and control It is aimed principally at undergraduates taking courses in Electrical Engineering Electronics or Mechanical Engineering who are in the penultimate and final years of an Honours degree Because the text is closely integrated with the use of a widely available software package it will also be of interest and use to a more expert audience with a control background but who may not be familiar with these invaluable tools Finally it may be of use to others who may not be control specialists but who need to acquire a background of control for other purposes Some of the material has been used successfully for such a purpose with an M Sc programme for Power Engineering students **Labs for Signals and Systems Using MATLAB** Virginia L. Stonick, Kevin Bradley, 1996 This text uniquely connects theory with application using MATLAB and provides an appreciation for the underlying mathematics within linear system theory It ties MATLAB to the teaching of physical applications of signals and systems in a laboratory setting which Stonick is the first instructor in the country to accomplish **Feedback Control Problems** Dean K. Frederick, Joe H. Chow, 2000 This book is the first complete text in the BookWare Companion Series TM to thoroughly integrate the use of the MATLAB computing environment into the standard sequence of courses taken by electrical engineering majors Use of this text makes it possible to focus on the problems being solved rather than on the programming necessary to obtain a solution The authors utilize a computer biased approach in which computer solutions and theory are viewed as mutually reinforcing rather than as an either or proposition Additionally they adhere to the axiom that one learns by doing rather than by listening this text features more than 100 examples 200 exercises and 250 MATLAB scripts that directly support the authors flexible treatment of discrete and continuous time This Updated Printing revises the book and code examples available for downloading from the Brooks Cole Web Site to MATLAB V5 **American Book Publishing Record Cumulative 1998** R R Bowker Publishing, 1999-03
